

HealthClinic2You

On-site catch-up immunisation services for
schools, universities, and educational institutions

School & Educational Immunisation Support

Protect Your Pupils and Staff. Strengthen Your Community.

Why Catch-Up Immunisations Matter

Not all pupils and students receive their routine vaccinations on time.

Missed doses can leave individuals, as well as the wider school or university community, vulnerable to preventable disease.

Outbreaks of infections such as measles can still occur in educational settings when vaccination coverage is incomplete

Diseases like meningitis can develop rapidly and have serious consequences

HPV vaccination plays an important role in protecting long-term health later in life

Educational institutions play a key role in protecting health, preventing outbreaks, and supporting public health efforts.

Ensuring pupils and students are up to date with their vaccinations helps safeguard both individuals and the wider community.

Catch-Up Vaccinations Available

We provide on-site delivery of routine and catch-up vaccinations,
in line with UK immunisation guidance.

MMR (Measles,
Mumps, Rubella)

HPV

MenB

MenACWY

Flu vaccination
