

AlcoDigital

FULLY AUTOMATED BREATHALYSER SYSTEM WITH FACIAL RECOGNITION

Worksober is a fully automated alcohol screening system for alcohol testing in the workplace. Linked to the cloud via WiFi, LAN or Mobile Data the Worksober identifies employees with facial recognition technology and automatically carries out breath testing according to your requirements.

A photographic proof of test is uploaded in realtime to be viewed anywhere in the world via a standard browser portal with alerts for positive tests via email or SMS.

It functions autonomously with no need for maintenance, staff or costly consumables.
