

“Very agile and a rare ‘can do’ attitude”

MAN Truck & Bus is a leading Global supplier of Commercial Vehicles from 3.0 to 250 tonne Vans, Trucks, Bus and Coaches.

MAN were previously working with multiple vendors for their Wi-Fi and Network security but found that they were periodically facing authentication issues which would disrupt their day to day operations. They were looking for a company with broad in-depth knowledge of all their inter-connecting systems to streamline their IT to ensure they had a superior level of resilience.

WHAT DID BLUE SKY SYSTEMS DO?

We provided support to their Network Access Control system and diagnosed the reasons for some of their long-term difficulties where their existing partners were not able to.

Recently they had a network issue which we were able to diagnose within 10 minutes. More importantly, we were able to replace the faulty equipment within the next business day. Since then we have continued to provide proactive suggestions to ensure that their IT continues to work seamlessly, not just now but also in the future.

Overall, MAN were thrilled with how easy Blue Sky Systems were to work with and describe us as;

“Highly technical, easy to understand and methodical”

More notably, Sajid Khan (IT Manager) liked the fact that our project style is transparent, uses straight forward language and has the right amount of design documentation ultimately meaning ‘less talk, more action’.

We asked Sajid how working with Blue Sky Systems has benefitted MAN;

“Enhanced internal security, WIFI solutions, LAN services and cabling/comms services has enabled MAN to enjoy an excellent level of consistency, stability and resilience”

The roll out of the project went extremely smoothly as it was tailored for their specific requirements. Sajid rated Blue Sky Systems 10/10 and would happily recommend us.

We look forward to continuing to work with MAN.

Blue Sky Systems has helped MAN with the following areas:

- SERVERS
- STORAGE
- CLOUD
- CLEARPASS
- NETWORKING
