

Which products do you recommend?

At Full Control Networks we believe we can help people get more from their networks. To get the control, visibility and speed you demand. Here are a few recommendations from us.

Copper and Fibre Cable Testing

Copper and fibre cabling test tools: from wiremap & testing how fast the network will run over your cabling, to certification against the industry standards. Plus inspection and full OTDR for troubleshooting fibre.

Network Testing and Troubleshooting

Easy to use testers to check connectivity, switch stats, network health & config, and line rate packet analysis. A range of tools that vary in price and feature set for fast and detailed troubleshooting up to 100Gig.

- To find out what's going on right now look at the range from NetAlly
- To monitor what's happening over time and drill down into the packet data for what happened in the past look at Allegro Packets

WiFi Networks

Tools to troubleshoot WiFi, site survey an existing installation to check the coverage or plan the number & locations for new APs to cover a space.

Network Monitoring

Dashboard reporting tools to monitor the network, see simple red/green on your key devices with alarms and long term data to spot trends.

Network Performance & End User Experience

How is the end user experience for those working remotely? What is the performance of your cloud/ hosted apps like O365? Is the migration project meeting the SLA? Are you getting the WAN capacity and quality that you're paying for? Who is using all the bandwidth?

Network Security

Visibility of all connected devices, assessment of their risk and enforcement of policies governing network access. Now includes risk exposure management and threat detection & response.

Getting access to the data

Network taps and packet brokers for getting access to the traffic in your switched or routed environment. Combine, filter & copy data streams. More accurate than spanning and great for switches with less spare ports.

Professional Services & Training

If you are looking for an independent resource to help with wireless planning or surveying, to gather data on application performance/end user response time, or to report on the capacity of the network core or links between sites – we have the knowledge, the time and the tools! We also offer training on products and technology, such as WiFi.

"We always find Full Control Networks very helpful, they are our first point of call if we need something in the network arena." John Wilson, BP

"The network is under control again and we have a clear plan of work for the future thanks to the report provided." Ronnie Perpete, Trafford College
