

Supercharge your security operations program

One platform, total security data awareness

Pillr acts as the foundation to your cybersecurity stack, providing a single-console view of the security data managed and protected by your team. The platform integrates with the industry's most performant cybersecurity technologies—we offer over 450 integrations, today—to deliver security events and insights in an intuitive, web-based UI/UX with features supporting efficient analysis and safe remediation.

**Collaboratively managed
by our 5 dedicated, expert
24/7/365 SOC teams.**

Flexible contract options

We offer a long-term free trial to IT teams and service providers, with a flexible contract experience including annual and month-to-month options. No minimums or size restrictions. You can truly cancel anytime.

Platform capabilities + features

- Analyze and act on events across your security toolset and tenants in a single console, with the ability to investigate files in an isolated sandbox environment
- Files containing executable content are identified at ingestion, and every executable file and browser extension is hashed and inspected
- All URLs are checked against malicious domains—Pillr incorporates threat intelligence from 35 feeds, including Check Point Global Threat Intelligence
- Maintain awareness of potential data leaks and email breaches with the ability to configure behavior-based tracking and alerting
- Search your application inventory when new known threats are identified to assess and remediate past exposure
- Lightweight Pillr agent continuously monitors endpoint telemetry and can be easily deployed through RMM software or an automated process, such as a .MSI or .PKG installer
- 450+ integrations available, plus our commitment to develop and support integration with 'any service, any tool' on Pillr
- Additional security services available through the platform, including incident response and penetration testing

Supported by the Pillr SOC

With Pillr, your team is supported by over 85 security analysts and threat hunters stationed in our 5 global security operations centers. Providing true 24/7/365 collaborative event investigation and monitoring across your technology stack and tenants, alerting your team in real time to potentially malicious activity.
