

Vaioni Leased Lines

#beextraordinary

As businesses have adopted more cloud-based software services like Office365 and Salesforce, many are relying on their internet connections for their day-to-day activities, so the bandwidth required for businesses to stay productive, efficient and secure is increasing at an incredible rate.

This means that many businesses are finding that their normal broadband connections are no longer fit for purpose and instead, are investing in a dedicated Leased Line.

WHAT IS A LEASED LINE?

Upgrading from a standard broadband connection to a Leased Line can appear to be a big step for some companies, especially considering the additional investment. But for businesses experiencing considerable growth, or reliant on their internet connection for growth or moving to the cloud, a Leased Line is one of the most valuable investments you can make.

Instead of sharing an internet connection with other businesses close-by, a Leased Line travels directly from our core network, straight to your network. Your business is the only one that can use the connection and you can therefore take full advantage of reliable and symmetrical down/upload speeds and bandwidth that doesn't slow down at peak times.

KEY FEATURES:

Uncontended bandwidth

A typical broadband connection has up to 50 other businesses sharing the same link to the closest exchange, which means that high or peak time usage across all connected users can have a noticeable negative effect on reliability and speed. Leased Lines prevent this by ensuring that your business, and only your business, is using the service, therefore there's plenty of 'breathing room' during busy periods.

Symmetrical speeds

Businesses require reliable download speeds as well as upload speeds. Video conferencing, file sharing and remote backups can all be affected when a business' upload speed isn't up to the task. Leased lines provide the same upload and download speeds so that your business can complete whatever task you need.

Enhanced SLA

Our core network has an incredible availability score – in the last five years we've had a single outage of less than 15 minutes. We're so confident in the reliability of our network that we offer a full day's service credit for each hour of downtime, available from the first minute of any outage you suffer, rounded UP to the nearest hour. And we guarantee a fix in less than 5 hours.

ADDITIONAL BENEFITS

Free best-of-breed router

We will provide the best router for your business' needs, which is usually either a Cisco or Mikrotik branded router.

Internet backup

As standard, we provide a secondary connection with your Leased Line. The benefit of this is that if your main connection suffers an outage, your team will still be able to work and you won't lose money because of downtime.

WHY VAIONI:

Vaioni is a leading provider of connectivity services – we provide over 4,000 connectivity solutions globally, alongside complementary security and voice services helping fast paced businesses meet the challenges of today's digital economy.

Quick installation

With direct access into our supply chain, and the direct support of our Prince2 qualified Service Delivery team, we offer one of the best installation times in the industry. Our mean Time-to-Provide is, on average, 23 days quicker than our competitors!

Network satisfaction guarantee

We're so convinced that you'll love the Vaioni way of business, that we offer a 30-day money back guarantee.

Extraordinary support

Our highly skilled engineers are one call away from supporting any issues you may face. Each engineer can log on to your service, diagnose and fix any problem there and then. Our engineers also proactively monitor all managed services 24/7 at our UK-based NOC. You also have the option to receive comprehensive reporting.
