

Yealink Future-Proof Home Workplace

Working Remotely With Yealink Voice and Video Device Solutions for Microsoft Teams

The global outbreak of coronavirus has affected the work and lives of millions:

1. As people working from home, professional audio and video devices are needed and the devices have to be easy to install and deploy.
2. Commercial expansions are facing business travel restrictions. Professional audio and video devices are a necessity for participating or holding formal meetings.
3. Remote diagnosis can be conducted via telemedicine to reduce the risk of infection during non-urgent diagnostics.

During this crisis, the entire Yealink team is working closely with our partners to provide you with broad portfolio of certified Yealink Voice and Video Device Solutions for Microsoft Teams and support as much as possible. Together, we will get through this.

The image shows the Yealink CP900 Room device, a sleek, modern meeting room solution. It consists of a main rectangular unit with a large, adjustable camera mounted on top. Below the main unit is a circular base with a textured, metallic finish. Dashed orange lines connect various features of the device to descriptive text blocks.
