

Find your weaknesses before the hackers do

Vulnerability management made easy

Modern attackers don't wait to act and usually execute their attacks within weeks of new vulnerabilities being discovered. With 10,000 checks, Intruder's continuous vulnerability monitoring system ensures that your perimeters are secured against even the very latest threats and that you have time to act before it's too late.

Along with continuous scanning, Intruder scans your systems and alerts you to newly discovered vulnerabilities, whenever they appear, using Emerging Threat Scans. This kind of proactive action is essential for businesses that don't have processes in place to research the latest threats and manually run scans for them.

Our intuitive, enterprise-grade solution is helping 1000+ organisations monitor their attack surface, save time, and prevent costly breaches.

Benefits:

Continuous assurance - Intruder's automated scanner runs around the clock to ensure your systems are secure

Cut through the noise - using our Noise Reduction feature, we ensure you're only notified about important issues

Simplicity - Vulnerability scanning doesn't need to be complicated. Our intuitive platform makes sure you can monitor your systems easily

Enterprise-grade - Our scanning engine is the same one used by some of the largest organisations in the world

Key Features:

External and Internal vulnerability scanning - Monitor your attack surface from both angles

Emerging Threat Scans - Keep on top of the dozens of vulnerabilities released every week

Cloud vulnerability scanning - Automate your workflows by integrating Intruder with your Cloud environment

Intruder Verified - Intruder's qualified penetration testers will investigate scan results for you, highlight serious weaknesses, and combine vulnerabilities to add business context beyond what an automated scanner can provide
