

AUTOMATION Test Consultancy

A set of services for improving, implementing and maintaining your test automation to enable successful, quicker and more effective regression testing.

Consultation

nFocus' consultation has been created to understand your current situation at a high level. nFocus provide an informed recommendation on how we can best support your automation efforts, whilst providing valuable feedback on your current approach.

Test automation readiness assessment

Helping you to identify the right approach, tooling and skills needed to successfully implement a test automation strategy to enable your adoption of Agile and DevOps.

Drawing on twenty-one years of experience and innovation, nFocus will undertake a fact-based review process covering your methodologies, technology stack, internal skills and resources to identify the right approach to test automation for your organisation.

In a very short time we'll be able to create you a roadmap including a recommended approach with appropriate tooling. You can then begin to implement this yourself or seek further support with our test automation consultancy.

Health check

Understand the health of your existing test automation. Whether you've got an existing framework that has fallen into disrepair, your team are unable to maintain and update your existing regression pack or key resources have left leaving you questioning your approach; the test automation health check will help identify the right way forward for your organisation.

Accelerated automation

By setting the automation strategy, including the approach to test data, environments, training the testers on how to follow the approach and converting current tests to automated tests, we can accelerate your adoption of test automation.

We can then incrementally hand over these automated tests for your existing team to manage the change and extend the automated regression pack going forwards. You will be able to see the benefits of this engagement within the first month.

On-demand automation test professionals

In addition to accelerating your adoption of test automation, nFocus can complement your existing team with our own test automation professionals; either on site or remotely to add to the regression pack and execute the tests on an on-going basis.

Many of our clients take advantage of this option to get the most out of their existing team through mentoring, overcoming peaks in requirements, and ensuring the agreed automation strategy is followed.

Automation managed service

Whether you have an existing automated regression pack, or are about to embark on a test automation journey, have you considered the efficiency and cost benefits of outsourcing the creation and maintenance on an on-going basis?

By outsourcing regression testing you are reducing the risk of losing subject matter knowledge from team members leaving, gaining eighteen plus years of automation success and guaranteeing change will be maintained under an SLA.
