

Themis

Your AI-powered email security specialist

Security teams are overworked and could use a helping hand in combating the most significant threat your company faces: email security. Themis emulates security analysts' decision making criteria to auto-classify and remediate phishing emails.

How Themis works

Themis is built on top of our decentralized, crowdsourced threat intelligence engine. She continually learns from the tens of millions of emails that run through our platform daily in order to provide your security team real-time recommendations on detected or reported incidents.

“Themis You Are My Best Friend!”

IT OPERATIONS MANAGER, TRANSPORTATION INDUSTRY

The Challenge

SOC analysts and other security team members are tasked with managing a wide range of important security tasks across many critical systems, including email. And regardless of their experience or expertise level it is not feasible for these resources to detect and investigate the large volume alerts across all these varied systems produce on a daily basis. As cyber-attacks escalate in frequency and sophistication, most security teams can only invest time investigating about 10% of the alerts they receive –and that significant portion will be false alarms.

The Solution

There are too many alerts, incidents and attacks for most security teams to handle. That's why we created Themis – a virtual security analyst focused on tackling the most type of security threat your company faces today: email-based attacks.

How Themis works

Themis is built on top of our decentralized, crowdsourced threat intelligence engine. She continually learns from the tens of millions of emails that run through our platform daily in order to provide your security team real-time recommendations on detected or reported incidents.

Accelerate phishing detection and analysis

Themis uses the power of AI to predict the legitimacy of any suspicious emails with high confidence. Operating with full autonomy, Themis gives security teams of all sizes with over 90% accuracy in classifying and remediating phishing attacks – all without any active human intervention.

Themis uses the power of AI to predict the legitimacy of any suspicious emails with high confidence. Operating with full autonomy, Themis gives security teams of all sizes with over 90% accuracy in classifying and remediating phishing attacks – all without any active human intervention.

Reduce your risk of being breached

Themis takes on the burden of analyzing and taking action on any detected threats to emails coming into your organization, freeing up your team to work on other security activities. This leads to an improved risk posture for your company, helping to keep you safe in today's dangerous, highly-interconnected world.

Why choose IRONSCALES?

1. We are fast to deploy, simple to manage and highly effective in stopping all types of email attacks
2. We deliver email security in the mailbox and defend against modern email threats
3. We integrate both email security and awareness training into a single offering

“IRONSCALES is an industry-leading comprehensive platform that enables business security teams and employees through multi-layered self-learning threat analysis by utilizing automated artificial intelligence (AI)-powered solutions.”

STEVEN LOPEZ, BEST PRACTICES RESEARCH ANALYST AT FROST & SULLIVAN

91% of cyberattacks begin with a phishing email
