RED SIFT

Red Sift is a data-driven cybersecurity business that helps organizations of all sizes and sectors address day-to-day security challenges. We offer users a platform of essential, automated tools designed to help users manage their email security and brand reputation.
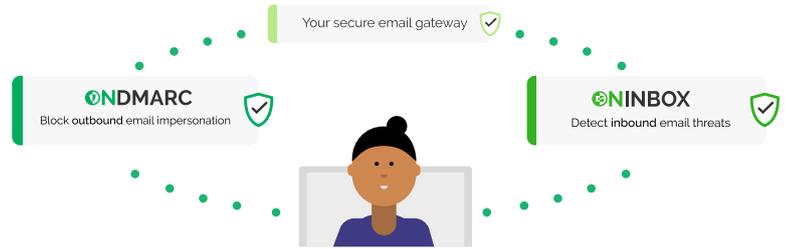

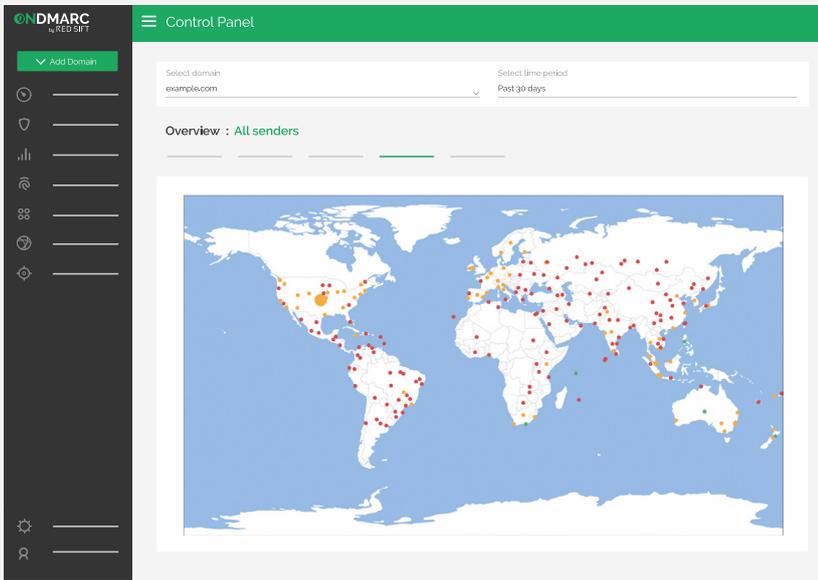

Essential business email protection by Red Sift

OnDMARC and OnINBOX work together to deliver both inbound and outbound email protection. From blocking attacks that use email impersonation to trick recipients into opening them, to detecting and flagging inbound email threats for end-users.

Your secure email gateway ✓

ONDMARC
Block **outbound** email impersonation

ONINBOX
Detect **inbound** email threats

ONDMARC

Overview : All senders

Stop domain fraud by blocking **outbound and inbound** email impersonation.

Key benefits

✓ Minimize time to protection

✓ Uncover who is using your domain to send unauthorized emails

✓ Reduce configuration errors

✓ Block phishing attacks by shutting down spoofing and domain fraud

✓ Increase email deliverability rates for verified mail sources

Powerful features

Investigate
Verify your email security setup in seconds

Threat Intelligence
Quickly surface and block bad senders

Dynamic DMARC
Ditch the DNS and manage SPF, DKIM, and DMARC records in one single place

Sender Intelligence
Forensic reporting that delivers granular information on sending sources

Dynamic SPF
Easily and safely overcome the 10 lookup limit without introducing the instability of SPF flattening

BIMI
Enhance your customers' and clients' brand experience with Brand Indicators for Message Identification (BIMI)

Schedule a meeting with one of our dedicated support team and secure your email today!

⊘NINBOX

Compatible with
Office 365
+
G Suite

Protect employees with intelligent **inbound** email threat detection.

Key benefits

✓ Enable your users to spot otherwise impossible to recognize risks at a glance

✓ Move away from "train and blame" by empowering your users to confidently interact with email

✓ Flag risks to InfoSec teams that bypass your secure email gateway and reach the inbox

✓ Identify suppliers who are vulnerable to impersonation and take steps to help them get protected

Powerful features

Out-of-the-box automation
Rapid deployment for speedy email threat detection

Threats visualized
In the header of every email, traffic light indicators alert users to the type and level of threats, across all clients, devices, and screens

Deep supply chain insights
OnINBOX Manager allows InfoSec teams to identify who their organization is talking to, how frequently, and the security those connections have in place to quickly identify vulnerabilities in their email comunication supply chain

Customizable warnings
Add optional text-based banners based on configurable rules

Advanced content scanning
Natural language processing understands the topic, intent, and level of urgency of the emails your staff receive and warns them of potential threats

Get in touch today to find out how you can take advantage of a platform built for handling all of a modern organization's cybersecurity needs!
