# Threat Protection

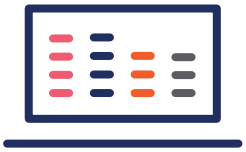
**With the number and nature of IT threats constantly evolving, it's essential for businesses to know how to prevent data loss and what to do when a threat perseveres.**

## Reporting

Pinpoint high-risk usage and cloud security issues by reporting on abnormal behaviour to prevent threats.

## Remedial Actions

A threat has been detected, but what next? Using automation, threats can be responded to and damage minimised - quickly.



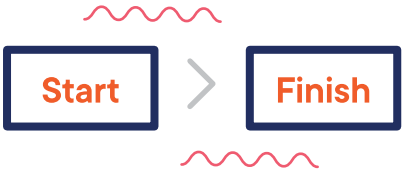
## Behavioural Analytics

Monitor individual behaviour to highlight potential threats and ensure that access is automatically revoked when necessary.

## Stay Compliant

We're living in a GDPR world, where data is priceless and compliance is everything.

Arm yourself with everything you need to stave off threats and stay within regulation guidelines.



## Start to Finish

Safeguard against malicious emails, suspicious links and viral downloads, protecting at every point.

## Extend Protection

Integrate with your devices to extend protection across your equipment, as well as the cloud.

## Alerting on Threats

Staying aware of threats is key under GDPR. Receive alerts as soon as suspicious activity occurs to stay on top of threats.

## Did You Know?

In 2017, data loss cost UK businesses an average of £2.48million per loss.

**£2.48m**

# Single Sign-On (SSO)

**Single sign-on makes passwords a thing of the past, allowing access through one secure set of credentials.**

## Cloud Applications

Through proxies, single sign-on puts every on-premise app at your employees' fingertips.

## Conditional Access

Machine learning detects suspicious behaviour, applying risk-based conditional access to minimise security risks. Users can also be restricted by location and device for additional control.

## Reporting

Monitor the who, where and when of individual user access to information, all in real time.

## Passwordless Working

Automatically change permissions to match an employee's changing job role as they move throughout the organisation, safeguarding confidential information in the process.

## Multi-Factor Authentication

Administrators can maintain confidence in the new Joiners-Movers-Leavers process with regular prompts to review permissions.

## Data Protection

Secure your data ready for a fresh start, with access automatically revoked on a leaver's last day.

## Facts

In 2017, '123456', 'Password' and '12345678' topped Time magazine's list of the year's worst passwords.

## How Does It Work?

On Premise Facilities — Single Password — Cloud Platforms

Under the old working practices a user would have to login to each application, a repetitive, error prone and tedious process. With single sign on the user now only has to login once a day, first thing in the morning.

# Data Protection

**A crucial part of running a business in the 21st century, data protection ensures an organisation's confidential information is protected from internal and external threats.**

## Classify Data

Classify data based on sensitivity, and maintain the protection of said data, even when provided to external sources and stored on corporate devices.

## Clarify Existing Data & Access

Automatically classify existing documents based on rules and labels built by your organisation.

## Labelling Data & Setting Controls

Encourage or force automated labelling based on a document's content.

## Privileged Access Management (PAM)

Allow access to sensitive information, restricting permissions by time and device, automatically removing individuals once they're done.

## Protecting Legacy Data

Ensure that no data is left behind with a solution which allows you to protect legacy data in line with your current roadmap.

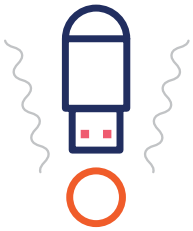
## Uncovering Personal Data Using Automated Rules

Stay GDPR compliant without having to lift a finger, by automatically identifying and managing personal data stored within the organisation.

NHS
Doncaster and Bassetlaw Teaching Hospitals
NHS Foundation Trust

"Keeping up to date with regular staff changes manually wasn't working. We couldn't ensure that new starters got access to the systems they needed in time, or leavers' access was removed from the system promptly. This compromised both employee productivity and security. We knew we needed to implement an automated system."

**Nigel Hall,**
**Doncaster and Bassetlaw Teaching Hospital**



## Reporting

Understand who has access to data, and who has accessed it in the past, for a top-down view of the organisation's security.

## Got Sensitive Data?

A confidential company strategy document outlining the marketing plan for the next year in a highly competitive industry can be restricted to view only and just for internal authenticated users.

# Access Governance

**Access governance ensures that end users only have the necessary permissions available to them, reducing major role-based security risks.**

## Reporting

Understand who has access to data, and who has accessed it in the past, for a top-down view of the organisation's security.

## Choose Between RBAC and ABAC

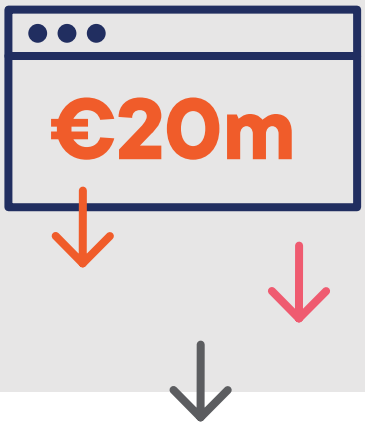
As job roles differ between organisations, so too does granting access. Organisations can choose to assign access based on an individual's Role (RBAC) or Attributes (ABAC).

## Attestation Campaigns

Employees can request access to a resource for a limited amount of time, allowing for autonomy, swifter workflows and security.

## Did You Know?

Companies who fail to report a data breach within 72 hours of discovery are liable to be fined up to €20million or 4% of their previous year's turnover under new GDPR guidelines.



Harris Federation

"Joiners and movers now get access to the correct resources immediately, ensuring they are productive straight away, whereas leavers are immediately denied access, helping to maintain security across our systems."

**Andy Meighen,**
**Harris Federation**

## GDPR Compliance

Under the EU's new guidelines, ensuring that only the right people can access employees' personal data is crucial to compliance.

## Financial Savings on Unused Licences

Are all your user licences accounted for? With former employees still active, organisations can rack up huge costs in unused licences.

## How it Works

An employee moving departments from HR to Marketing would take their accesses with them and then be able to view their new manager's salary. With Access Governance this permission would be automatically revoked on the change of role.
