Tessian Insider Risk Protection

Detect and prevent email data loss caused by employee mistakes and insider threats

Email is the lifeblood of many organizations as it is the most utilized channel for sending data. But human error and insider risk also make it the primary threat vector for data loss.

Inadvertent human mistakes and malicious behavior on email puts organizations and their customers' data at risk, breaching industry and data protection regulations.

Tessian's Insider Risk Protection Solution protects against the three leading data loss threats:

Tessian Insider Risk Protection Solution

Tessian's Integrated Cloud Email Security platform combines three dynamic solutions powered by machine learning to enable organizations to protect confidential data on email effectively.

Tessian Guardian

Automatically prevents accidental data loss from misdirected emails and misattached files

Tessian Enforcer

Automatically prevent data exfiltration via email to personal, unauthorized, and non-business accounts.

Tessian Architect

A powerful policy engine combining classic DLP policies with intelligent policies to provide custom protection against sensitive data loss.

Prevent data loss from misdirected emails

Tessian inspects content, and detects entity relationship anomalies to prevent email attachments from reaching unintended recipients.

Prevent data exfiltration events

Tessian uses machine learning meaning no predefined rules or blacklists are required.

Establish and maintain regulatory compliance

Tessian stops employees from sharing confidential data with unauthorized recipients.

Educate end-users and improve security behaviors

Contextual tailored in the moment training and warning messages are displayed to employees before they send risky emails.
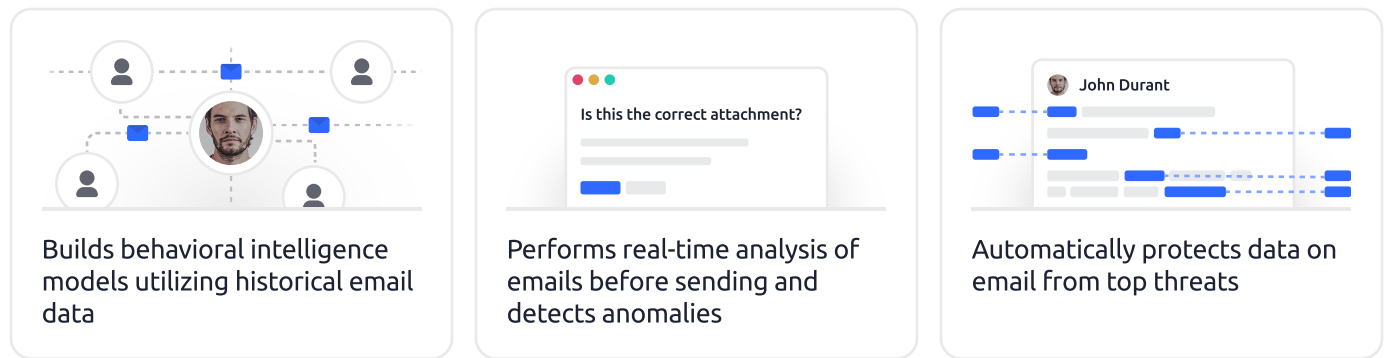

Easy integration

Tessian's API integrations allows security teams to centralize and orchestrate events from SIEM/SOAR platforms.

## Secures all enterprise environments

How does the Tessian Insider Risk Protection solution work?

Builds behavioral intelligence models utilizing historical email data

Is this the correct attachment?

Performs real-time analysis of emails before sending and detects anomalies

John Durant

Automatically protects data on email from top threats

> "Before Tessian, we didn't have clear visibility into data loss incidents on email or the true size of the problem. We believed it was happening, but we didn't have a solution or strategy in place to help us proactively combat it. Now, with Enforcer and Guardian, we're able to automatically detect and prevent incidents that could have a big impact on the business."

Effortless for Security, IT, and Compliance Teams

Gain granular visibility and control
into data loss events and view incidents in a single dashboard for easy remediation. Get complete insight into your riskiest users' email behaviors and data loss threats facing your email environment.

Comprehensive, seamless protection
Tessian secures all outbound emails sent across any email client (Desktop, Mobile, Webetc.) with the same consistent analysis – all within 24 hours of deployment.

Detailed reporting and audit logs
provide defensible proof against data breaches. If a risk is identified, Tessian's Risk Hub enables you to formally document all associated events.

Reduce admin burden of DLP by 10x
with end-user remediation and powerful policy logic that simplifies DLP configurations in minutes.

Experience Tessian in Action

Tessian Cloud Email Security intelligently prevents advanced email threats and protects against data loss to strengthen email security and build smarter security cultures in modern enterprises
