

About Us

At Full Control Networks we believe we can help people get more from their networks. To get the control, visibility and speed you demand.

With 20 years' experience in the networks industry, we are a leading independent provider of network products and services. Whatever your network requirements, let us support you in making an informed choice.

Copper and Fibre cable testing

Copper and fibre cabling test tools from inspection & cleaning to full OTDR and certification to the standards.

Network Testing and Troubleshooting

Easy to use testers from connectivity testing to switch stats and packet analysis. A full range for fast and detailed troubleshooting up to 10Gig.

Network Visibility and Monitoring

Dashboard reporting tools to monitor the network, see simple red/green on your key devices with alarms and long term data to spot trends.

Network Performance Management

Products for speed and bandwidth analysis, such as application response timing, throughput testing or monitoring hosted Apps. How is the end user experience? Who is using all the bandwidth? What is the performance of the WAN link? Is delay network, server or application?

Network Audit, Security and Compliance

Compliance tools to audit all connected devices and enforce policies on who gets access, next generation firewalls and edge security, end point security, SIEM event log management, security of admin passwords and end point security for safe clicking on links/attachments.

Getting access to the data

Network taps for getting access to the traffic in your switched or routed environment, plus combine, filter & copy data streams. More accurate than spanning and great for switches with limited port availability.

Wireless Solutions

Tools for wireless troubleshooting, for planning a new wireless network or to survey an existing installation to produce a coverage heat-map. Or consider our Professional Services and have our wireless engineers plan or survey for you and advise how to achieve optimal coverage?

Professional Services

If you are looking for an independent resource to help with wireless planning or surveying, to gather data on application performance/end user response time, or to report on the capacity of the network core or links between sites – we have the knowledge, the time and the tools!

ForeScout

"We always find Full Control Networks very helpful, they are our first point of call if we need something in the network arena." John Wilson, BP

"The network is under control again and we have a clear plan of work for the future thanks to the report provided." Ronnie Perpete, Trafford College
