

Paessler PRTG Enterprise Monitor

ITOps teams in large IT environments have thousands of devices, users and systems across multiple locations. It is essential they gain visibility and control over these complex infrastructures to ensure business critical systems don't fail.

PRTG Enterprise Monitor scales to large IT environments while keeping monitoring simple and ensuring central overview

Ease of use

PRTG has become a market leader in monitoring due to its holistic monitoring approach, its usability, and its simple and fair licensing.

Feature set

PRTG has all functionality included in every license – everything from IT infrastructure and Flow-based traffic monitoring to monitoring of applications and virtual, cloud and hybrid environments, right up to IoT set-ups.

Trusted

Based on more than 20 years of monitoring experience and the feedback of more than 300,000 users worldwide, PRTG is one of the most established monitoring solutions in the industry.

Licensing

The PRTG Enterprise Monitor has been designed for large environments. It provides the architectural flexibility to scale horizontally, ensuring maximum performance combined with a central overview including the ITOps Board. The flexible annual per sensor* subscription, OpEx-based cost model scales with you as you grow. Just like every PRTG license, PRTG Enterprise Monitor includes the entire monitoring functionality – no addons, no modules.

The ITOps Board

PRTG Enterprise Monitor includes the PRTG ITOps Board powered by Martello iQ. The ITOps Board enhances your PRTG setup with a service oriented, central overview across multiple PRTG servers. It significantly reduces alert noise and adds advanced analytics and SLA monitoring and reporting.

Integrations

PRTG integrates with analysis tools using APIs and pre-defined templates. It acts as a data collector and early warning system, helping to identify failures and indicating where deeper analysis is needed. Close partnerships with mainstream IT vendors and established players in the ITOM market make for seamless integration.

Paessler named Gartner Peer Insights Customers' Choice for IT Infrastructure Monitoring and for Network Performance Monitoring and Diagnostics

“We have a large network all over the country. We are using almost 500 switches in our infrastructure. To monitor the entire switches we are using PRTG Network Monitor software. It is very useful for bandwidth monitoring, alerts, detailed reports, maps and so on.”

License details

The PRTG Enterprise Monitor license is subscription based. There is no limitation on PRTG servers, but rather the license is based on the number of sensors*.

- Subscription licensing
- Includes the ITOps Board
- Unlimited PRTG server installations
- Prices on request based on number of sensors
