Pexip Infinity: Cloud Video Interop for Microsoft Teams

Connect enterprise video conferencing systems to Microsoft Teams meetings.

Pexip Infinity cloud video interoperability for Microsoft Teams provides full video, audio, and content sharing capabilities for organizations where data ownership and control are key requirements. Pexip Infinity is designed for larger enterprises and those under stringent regulatory compliance requirements.

Created for Microsoft Teams

Pexip Infinity for Microsoft Teams has been developed in close cooperation with Microsoft. It enables any video conferencing system to join Microsoft Teams meetings and allows authenticated systems to join as trusted participants without additional user interaction.

Designed for data privacy

The Pexip Infinity deployment model addresses the requirements of organizations regarding data privacy, ownership, and control. Pexip Infinity can run in Azure Government or in a dedicated Azure cloud tenant to keep sensitive data private.

Simplifies platform migration

A single application for both Skype for Business and Microsoft Teams video interoperability speeds up migration and enables organizations to effortlessly migrate from one communications platform to the other.

Accelerates journey to cloud

Pexip Infinity can replace or even co-exist with current customer video conferencing infrastructure and run in Azure, so customers can move IT assets and workloads to the cloud at their own pace. Pexip leverages modern cloud technologies and scales according to usage and geographical requirements.
