

cloudya

Your one-for-all cloud telephone system.

The new freedom in business communications.

NFON
Cloud Telephone System

Cloudya delivers even more freedom of communications for your business.

With its new cloud telephone system, Cloudya, NFON helps you overcome three major communication challenges, enabling you to maximise your productivity and grow your bottom line.

CHALLENGE 1

Complex, costly communications tools.

With multiple phone numbers, inboxes and communications tools, your employees can get behind and miss important calls and messages.

Cloudya makes things better with simple, intuitive communications tools and a single phone number and inbox for reaching every employee. With fewer missed calls and messages, you can speed up interactions and maximise your productivity.

Cloudya – making life better for your tech teams

Complex communications solutions are also difficult and expensive to deploy and maintain. This is a problem for your tech people, who often find themselves in the office in the evenings and at weekends.

By simplifying deployment, management and support, Cloudya solves this challenge and makes life better for your tech teams. With no physical infrastructure to manage, and simple tools for adding and managing users, IT can focus on more value-added work.

- **Intuitive, powerful features**
- **One login, password and phone number**
- **Plug and play deployment**

CHALLENGE 2

Restricted communications with employees out of the office.

With legacy communications solutions, your employees can only be contacted at the office. That means that response times are extended, making your business less responsive and less efficient. Cloudya solves this challenge with independent communications tools that

connect employees wherever they are working, on any device. This means you can speed up your communications, react to new opportunities faster and generate higher revenues for your business.

- › **Use any communication device**
- › **Communicate from anywhere in the world**
- › **Mobile-enabled**

CHALLENGE 3

Frequent interruptions to critical communications services.

Legacy phone systems often experience outages, interrupting your operations and impacting your revenues. Many also require constant maintenance just to keep them running, driving up IT costs and causing frustration for technical teams.

To overcome this challenge, Cloudya is built on fully redundant architecture. With access to expert 24/7 support, Cloudya also helps you continue working efficiently at all times.

- › **Enterprise-grade, high-availability infrastructure**
- › **In-house, end-to-end service management**
- › **Highest data security standards**

Free your business communications with Cloudya.

The easy-to-use, reliable and independent cloud telephone system from NfON.
