The IT Team

Meet your enemy

- Multiple Forms
- Employs a host of different “agents” and techniques
- Terribly Naughty

Let's begin our journey...

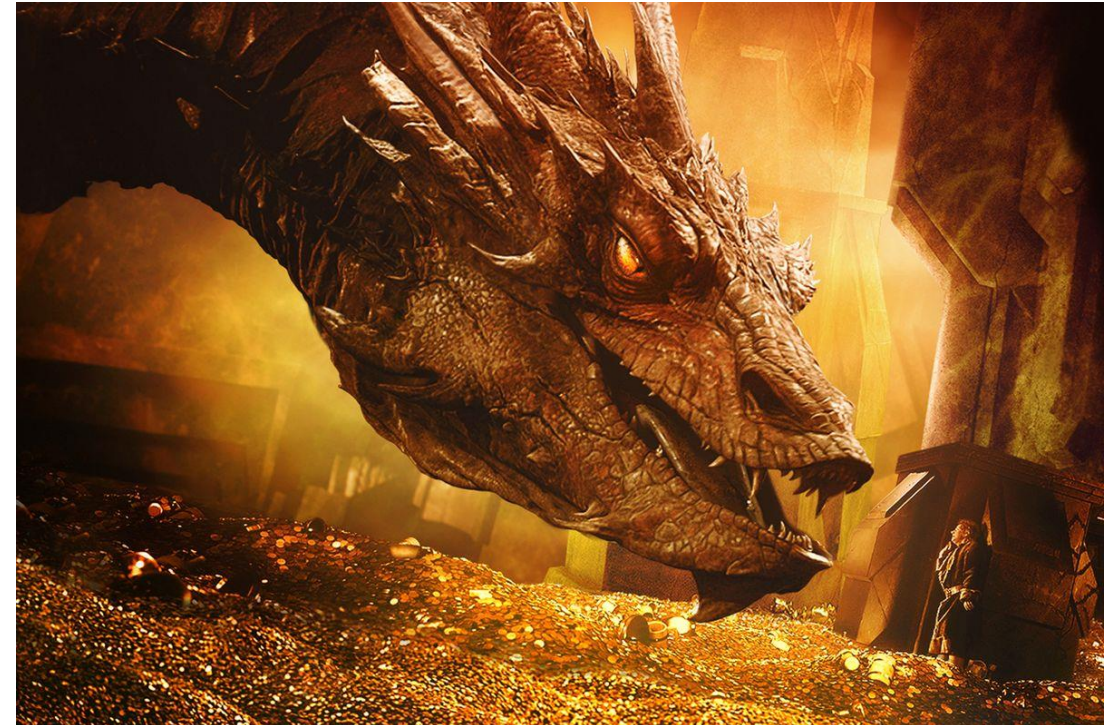

- The IT hardware and software you are unaware of.
- Makes being secure completely impossible.
- Hard to get rid of without the right weapons

- How do fight what no man can kill?
 - Inventory
 - System Building
 - Automation & Self Service
 - The IT Team

- The tool of someone looking to profit in financial gain
- A tool which can effectively lay siege to your entire estate
- A tool which exploits a known vulnerability in a system

- How do we fight it?
 - Patch Management
 - Anti-virus?
 - Other things better than Boromir...
 - The IT Team

- Something that hides inside your organisation in the guise of a friend.
- It has two sides to it, one good, one bad.
- Once you overcome it, be sure it doesn't creep back in.

- How do we overcome it?
 - Inventory
 - System Building
 - Patch Management
 - Automation
 - The IT Team

- UEM isn't just a single tool, it's a team working seamlessly together
- UEM is a tool to work with your IT Team, not replace them
- We can do so much better than Boromir...

And remember...

Thank you and come by stand N340 for more.
