

# Future-Proof Mobile Access Control

On a mission to improve safety and security for the built world, Openpath creates smart, customizable access control solutions. Sleek hardware and convenient hands-free, mobile entry enhances the user experience, while cloud-based enterprise software effortlessly scales to make remote system management easier than ever.

Our platform is designed with an open API architecture and backwards compatibility for superior interoperability. Seamlessly integrate with best-of-breed technology partners, including solutions for tailgating, video management and surveillance, lockdown, active directory platforms, visitor management, building automation and more.

## Cloud Software

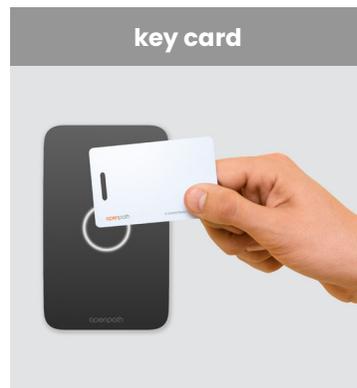

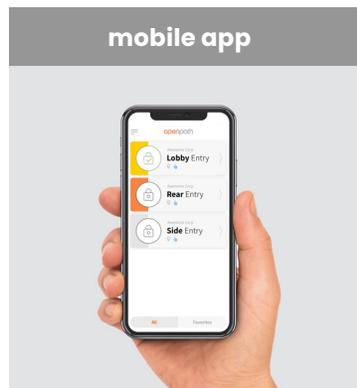

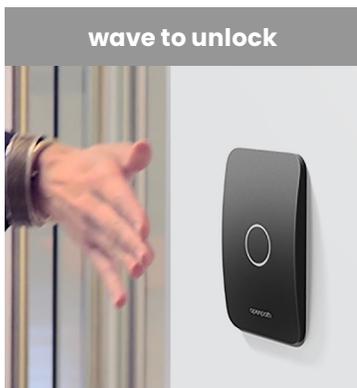

Manage all your sites and users from a single interface for real-time access control 24/7

## Hardware

All you'll need are Openpath's Smart Hub and Readers to get your system up and running

## Access Methods

Openpath has many ways in. Employees can choose which secure key fits them best.

## Key Features

**Wave to Unlock**  
Unlock the door without ever needing to take your phone out of your pocket

**Wellness Verification**  
Automate symptom screenings required for entry

**Occupancy Tracking**  
Manage and set capacity limits to enforce social distancing

**Lock Down**  
Instantly activate custom lockdowns, any time from anywhere

**Integrations**  
Openpath integrates with the solutions you already use

**Real-Time Reporting**  
See access events as they happen

**Guest Pass**  
Text a one-time key to visitors

**Scheduled Locking**  
Set schedules for any entry

**Mobile Unlock**  
Use a mobile phone or smartwatch to gain access

**Remote Access**  
Unlock any door from anywhere

**Triple Unlock**  
Patented technology uses BLE, WiFi, and Cellular signals for optimal efficiency

**Deployment Options**  
Our solution works as a standalone access control system or an add-on to the one you already have

## Risk is Everywhere.

Keys can be copied, badges passed around, and an unattended desk can give the wrong person the right credentials. Access control systems are only as secure as their fundamentals. We designed Openpath as a complete security ecosystem, with solutions to some of the most common complaints in the industry. Mitigate risk with the following security features.

### Physical Security

Smart devices can instantly improve your security profile by enabling multi-factor and/or biometric authentication, one time passwords, employee location awareness, and immediately effective credential revocation.

### Virtual Security

The cloud is continuously upgraded and updated to protect against emerging threats. Local computers will often remain vulnerable and need time-consuming upgrades to various system software.
