

# The Connected Workplace

Improving workplace experiences with a holistic location-aware employee app

Equip your company with a powerful mobile solution for workplace experience that merges physical spaces with digital interactions – regardless of where work is located. This comprehensive solution provides you with the technology, processes and tools to create smart, innovative and connected workplaces.

### Hot Desking/Desk Hoteling

Search for workstations on a live map, see desk amenities, view desk availability, and reserve a seat. Automatic check-in and check-out relays real-time desk usage.

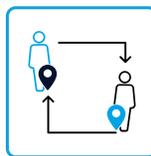

### Room Booking

Search for and see the location of meeting rooms and other shared spaces on a live map. Refine results based on amenities and meeting requirements, check a room's status and make a reservation. Meeting info and notifications are automatically sent to attendees.

### Wayfinding

Make it easy for employees, guests and personnel to navigate your properties with turn-by-turn directions on a digital map. With on-device positioning, you can effortlessly get where you need to be, such as a reserved workstation or meeting room, with a familiar blue dot experience.

### Find a Colleague

Search for a contact in the central directory, identify their workstation and receive turn-by-turn directions to their space.

### Occupancy Reporting

Beacons and sensors automatically register when employees arrive at their reserved workstation. A record of who sat where and when aids in real-time occupancy reporting, giving operations better control over per-site capacities, workforce thresholds and rapid response protocols by user's location.

### Real-Time Notifications

Real-time updates and time-sensitive communications keep employees and visitors informed. With targeted location-based messaging, you can rest assured that the right message is getting to the right person at the right time.

### Amenities

Make the office a fun and easy-going place to be with in-app access to workplace amenities, events, health and wellness, and other bookable opportunities and experiences.

### News and Events

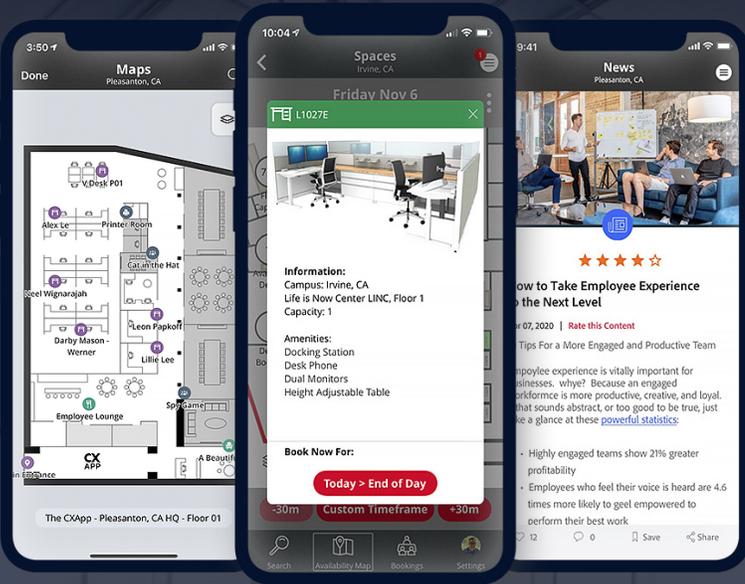

A company-wide newsfeed featuring the latest stories, blogs, thought leadership and announcements helps employees stay informed with the option for personalized content.

### Smart Parking

Relay parking information to employees regarding space availability and create a seamless transition from the outdoors to inside the building.

# Smart Offices Begin With Smart Technology

Transform your workplace  
into a **smart, innovative and  
connected space** so you can:

- Keep people, places, and assets connected across your campus with a comprehensive mobile solution
- Empower employees to control their in-office and on-the-go work settings
- Create seamless user experiences that enhance productivity and improve operational efficiencies
- Automate personalized and location-aware on-site experiences
- Integrate with other workplace technologies and systems for a digital-front-door to the workplace experience

Give your company the advantage it needs to remain competitive and deliver a frictionless work environment for employee engagement!
