

FUEL MANAGEMENT SOFTWARE

FuelHub

Together with customer feedback, Triscans in-house development team have created **Fuel**Hub, effectively bringing your Fuel Management in to the 21st century with sophisticated technology.

Triscans **Fuel**Hub is web-based online fuel management which offers real-time data enabling operators to gain full control of fuel stocks.

Benefits

Triscan's FuelHub offers a wide range of benefits:

- Optimised performance and increased security
- In-house development team ensuring up-to-date software
- Compatible in any browser across multiple devices
- Faster, easier to use platform
- Real-time fuel management enables fuel stock to be managed at a central or local level.
- Accounts for every drop of fuel with full downloadable audit trail
- Supported centrally by Triscan Aftercare who offer diagnostics and technical assistance over the telephone from 06:00 to 22:00, 7 days a week

rackspace

How does it work?

Using information from the tanks, pumps, identification devices and hardware, real-time data is presented in a series of dashboards. This offers a full history of vehicle information for an entire fleet and identifies any potential losses. Numerous concurrent users can be nominated and authorised access. The software allows detailed reporting of usage, stock, performance and trends, which can all be easily exported or printed.

Overview

FuelHub

Key specs

- User friendly
- Real-time fuel management via OLA
- All vehicle, driver and fuelling information in one place
- Cost centre and custom vehicle grouping for resale
- Web-based and supports multiple concurrent users

Reporting

Key specs

- Schedule reports to be emailed to users on a set date, time and / or frequency
- Comprehensive user audit log
- Custom fields for easy reporting
- Can be filtered by one or multiple choice such as: vehicle, driver, depot, cost centre
- Can be easily exported enabling easy reported data for claims such as BSOGs

Security

Key specs

- All data secure
- Increased security
- Secure web hosting via Rackspace, an enhanced security platform with a managed dedicated server hosted in the UK
- 100% Network uptime guarantee
- ISO 27001 accredited data centre

Stamp out fuel theft:

- Account for every drop of fuel with full audit trail
- Simple dashboard to show discrepancy between deliveries
- Record invalid attempts to access fuel by unauthorised IDs
- Set fuel limits by vehicle
- Enable alerts when pumps are disabled
- Review low tank stock alerts
- Access advanced vehicle exception reports
- Sudden loss alerts

Cut fuel costs and CO_2 output:

- View CO_2 and fuel savings by kg, L and £
- View CO_2 output, low stock levels and tree ofset
- Calculate vehicle MPG
- View a daily, monthly or annual average fuel usage report
- Works with all fuels including HVO

Key features

- Integrates with third party systems for vehicle tracking
- Real-time enabled to control access to fuel (if connected to a Triscan Apollo2™ or ApolloR2 fuel management system)
- Reports can be exported and saved in a number of formats including: XML, CSV, PDF, MHTML, Excel, TIFF and Word
- Reorder and low level stock warnings are easily set-up
- Live stock level monitoring available, enabling fuel stock to be managed at a central or local level
- Alternative fuel vehicle management available (dual fuel, LNG, CNG, H & HVO)
