

Fleet Management Software

Total asset control at
your fingertips

When you run a fleet it's not easy to be everywhere, all the time. Yet with the demands of operating a compliant, well-maintained fleet, you need to perform this feat. That's where r2c's fleet maintenance and compliance software comes in.

Driver checks will upload instantly wherever they take place. Every completed service and maintenance sign-off appears in front of you. The health and compliance of your fleet is laid out on screen, in real time.

It means that you can be in one place and yet in complete control of your vehicles throughout the country. Reassuring. Compliant. Accurate. Confident. Through innovative digitisation, our software will transform how you run your fleet.

Connected fleet and workshop management

Incident Management

Capture, track and resolve all types of incidents quickly and compliantly

Fleet Operator

Putting you at the heart of your fleet operation

With r2c, you can pull in service documents, histories and transactions from every workshop, depot or dealer. No chasing of paper records, trying to match multiple copies or only finding out about work or spend after the event.

Completely digitised and operating in real time, you get the definitive version of everything that is going on, at your fingertips.

Automatic reminders and maintenance scheduling help you line up workflow. Safety and compliance breaches alert you to issues before they become problems. Intervention ahead of time rather than alarm as it happens. All in real time, controlled by you from connected, seamless dashboards.

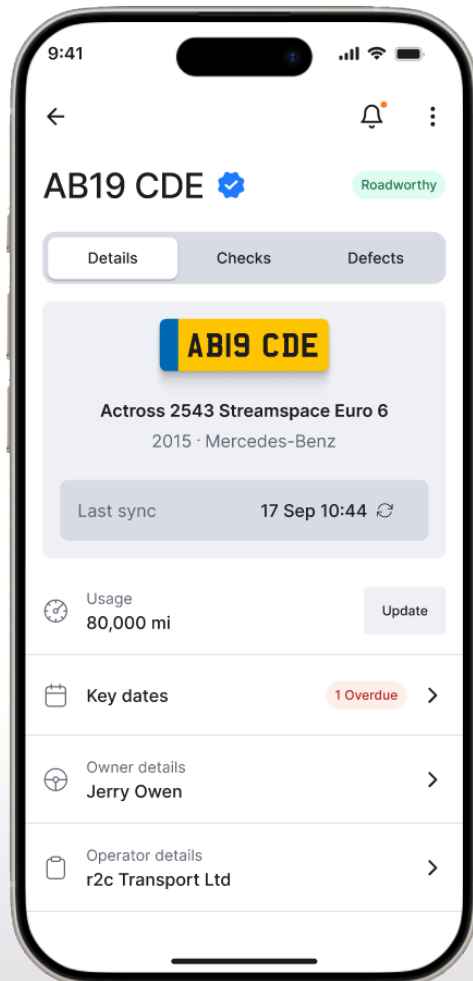

The digital Core of your fleet

Driver Checks - pre use app

Compliance checks made easy

NEW APP
AVAILABLE
NOW

One team driving compliance: you and your drivers.

A fully compliant fleet takes teamwork. With the new Driver Checks app, drivers complete daily walkaround checks quickly and easily on their mobile device, and you receive the report instantly. Nothing overlooked. Nothing delayed.

Built to support DVSA, Health & Safety, LOLER, PUWER and ADR requirements, Driver Checks helps you stay compliant and confident in your fleet's safety at all times.

Clarity matters. Drivers can capture photos and add detailed notes to every defect, giving you complete visibility of any issues in real time. No guesswork. Just clear, actionable information.

Manage defects from first report through to workshop completion with real-time alerts, full audit trails and access to comprehensive driver check reports, all in one connected platform.

With r2c, our defects are reported live through our system and we're notified if they aren't completed in time.

Ultimately it's reduced our vehicle downtime - we've saved over £20,000 a year in the last five years.

Allan Morris

Digital driver management

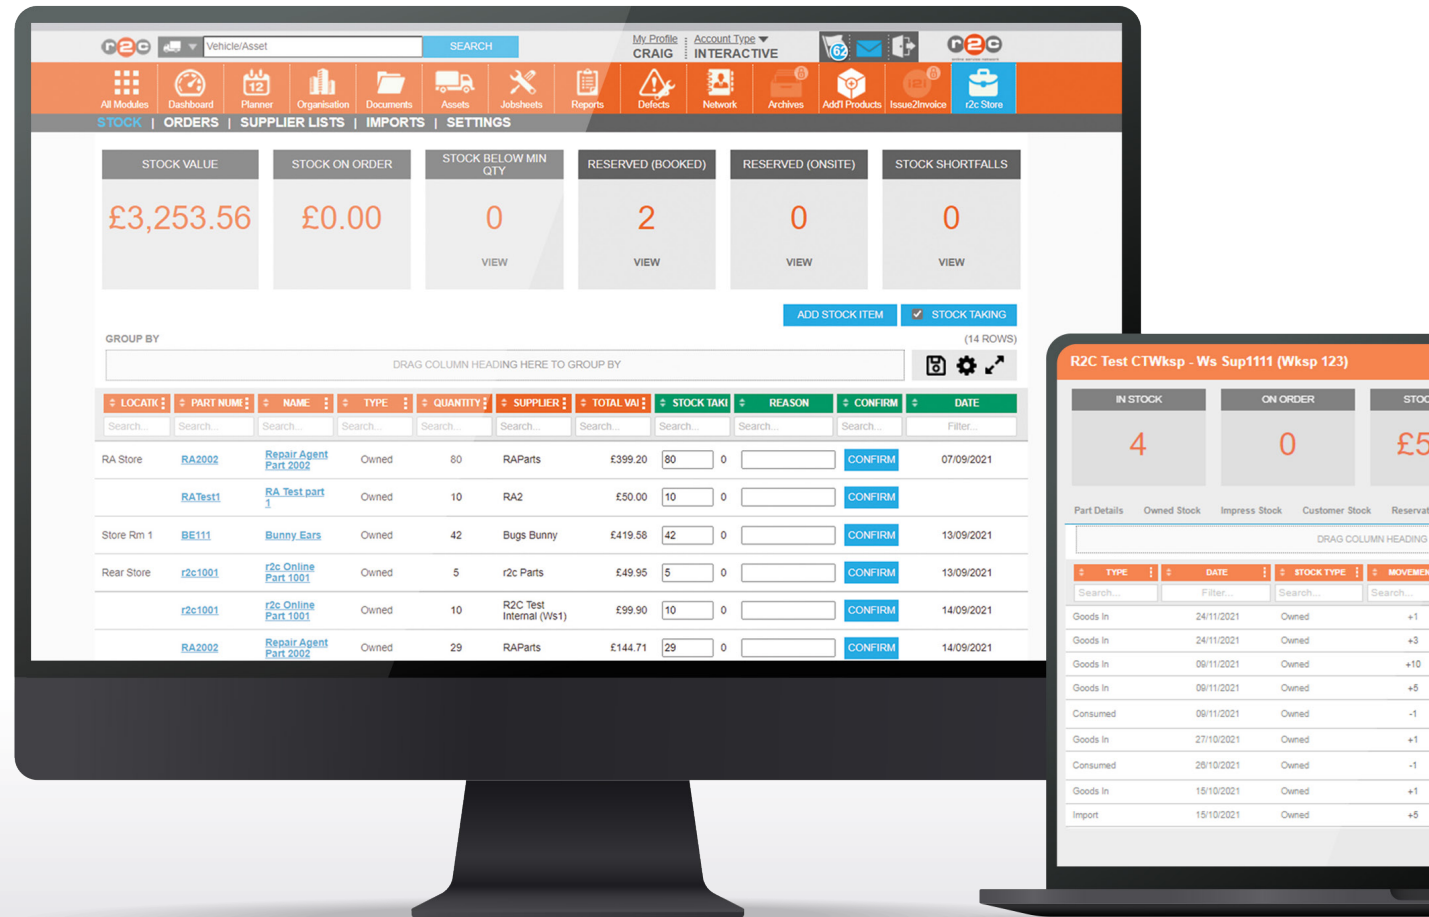

- A full driver's check report at your fingertips
- Compatible with any asset using custom checks and forms
- Digital sign-off
- Real-time defect alerts
- 100% DVSA compliant

Business Intelligence

Data reports, compliance & KPI dashboards

Helping you achieve
Earned Recognition.

Designed with Earned Recognition in mind, Exemplar's compliance dashboard lets you measure progress against KPIs, while an 'early warning' trigger system helps you avoid future mishaps.

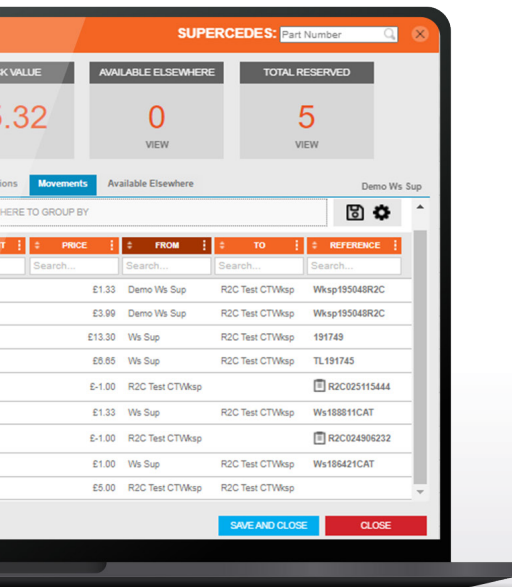

Intelligence and insight is everything.

Your fleet creates a lot of data, but you need to turn all those numbers into knowledge. What's working. Where problems are occurring. How issues are best solved. Why vehicles perform the way they do.

With our powerful business intelligence tool, you can draw all the data together to create sophisticated and tailored reports and insights that demonstrate what is happening on the road, in the cab and on the workshop floor.

The fleet health check tool provides a snapshot of your fleet in real time, showing compliance and performance. And you can see problems coming too, with the early warning system. It highlights gaps in your records or missing data, so you can sort them before it becomes an issue.

The screenshot shows the SUPERCEDES software interface. At the top, there's a header with 'SUPERCEDES' and a search bar for 'Part Number'. Below this, there are three main sections: 'K VALUE' with a value of 0.32, 'AVAILABLE ELSEWHERE' with a value of 0, and 'TOTAL RESERVED' with a value of 5. Each section has a 'VIEW' button. Below these, there are tabs for 'Movements', 'Available Elsewhere', and 'Demo Ws Sup'. A table is displayed with columns for 'PRICE', 'FROM', 'TO', and 'REFERENCE'. The table contains several rows of data, including vehicle details and prices. At the bottom, there are 'SAVE AND CLOSE' and 'CLOSE' buttons.

PRICE	FROM	TO	REFERENCE
E1.33	Demo Ws Sup	R2C Test CTWsp	Wksp195048R2C
E3.99	Demo Ws Sup	R2C Test CTWsp	Wksp195048R2C

Authorisation & Invoicing

Fast, accurate maintenance authorisation and invoicing

Finance exports available.

Our finance exports allow you to get the required invoicing data into your finance package, saving you time and making invoicing a simple process.

Automate pricing, authorising and invoicing.

Our Authorisation & Invoicing tool automates the process for pricing, authorising and invoicing service, maintenance and repair (SMR) work between fleet operators and repairers.

It eradicates the unwieldy game of 'table tennis' - the never-ending back and forth of emails and calls between fleets and repairers. Instead, you can automate large swathes of authorisation requests in just a few clicks.

Quickly generate automatic, pre-reconciled invoices for a dramatic improvement in accounts efficiency. Now, with real-time updates, invoice errors are a thing of the past.

Once a defect is logged in the workshop, a quotation can instantly be created, based on agreed menu pricing. The customer is then able to authorise or query in real-time. It's a win-win.

Sophisticated Electronic Agreement

Incident Management

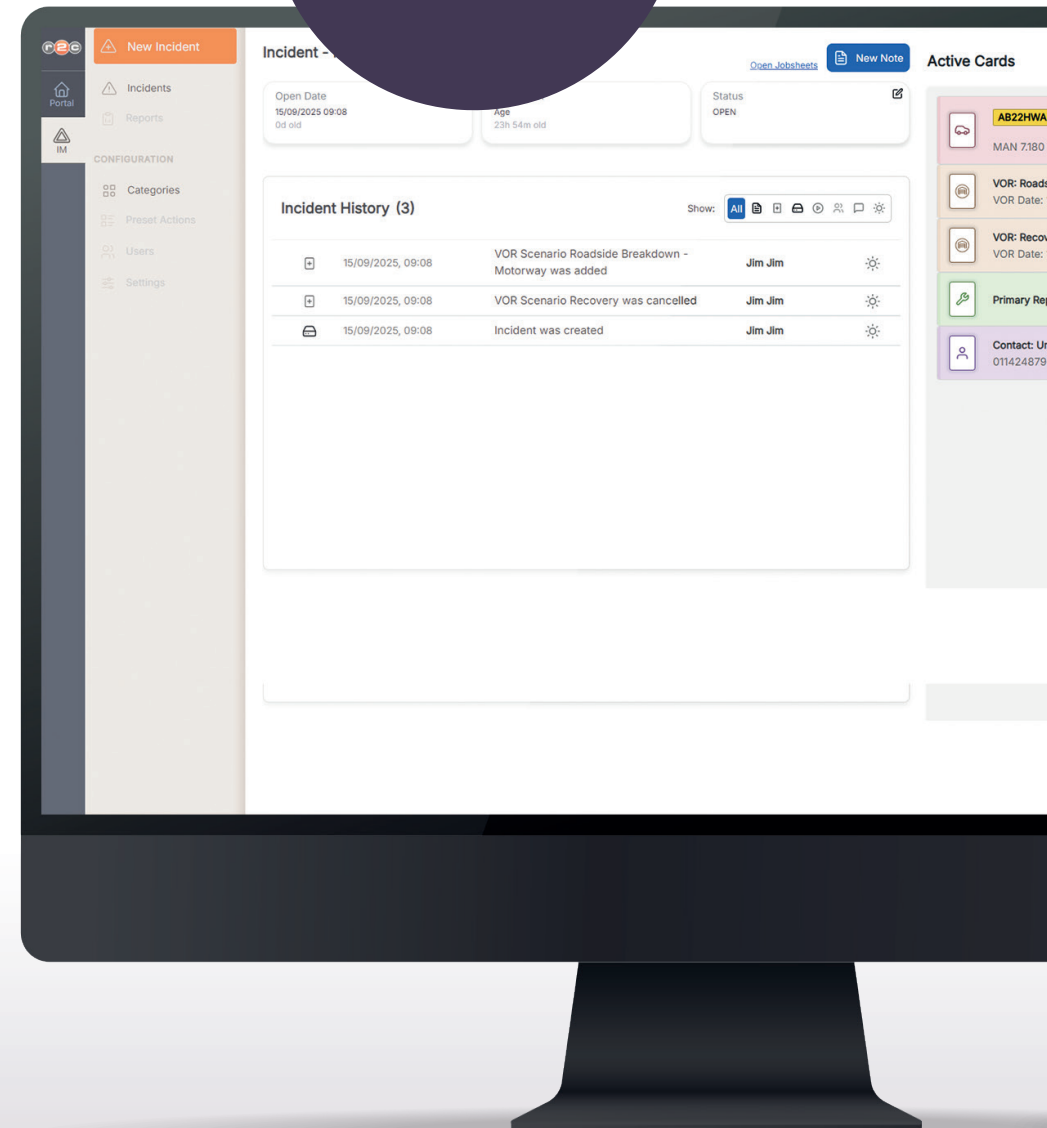

NEW

Digitally Report, Track & Resolve Incidents with Full Visibility

From minor bumps to serious collisions, vehicle incidents cost time, money and reputation.

r2c Incident Management gives you a centralised, digital system to log, track, and manage all incidents – helping you reduce risk, support drivers, and improve outcomes.

Built for fleet operators, transport managers and compliance teams, the platform ensures every incident is reported, investigated and resolved with a full digital audit trail.

Features:

- Centralised Incident Reporting
- Full Incident Lifecycle Tracking
- Everything in one place
- Assign Follow-up Actions
- Audit-Ready Reporting

APIs & Integrations

Document Integrations

Automatically import and map documents to the correct job and asset .

Document Integrations is an automation feature that brings third-party inspection reports straight into r2c.

It captures documents from an inbox, maps them to the correct job and asset, and stores them securely, all without the need for manual uploads.

It's seamless, accurate, and built to scale with your fleet.

- ⚙️ No more manual uploads
- ⚙️ Mapped to the right job
- ⚙️ Less admin, more productivity
- ⚙️ Audit-ready reporting

Jobsheet API

Connect Suppliers, Streamline Jobs & Eliminate Manual Entry.

Keeping workshop job sheets up to date with the latest parts, labour, and consumables can be time-consuming and prone to error. The r2c Jobsheet API enables seamless, real-time integration between r2c and third-party systems such as parts suppliers and stock platforms, so you can automate job data updates, speed up approvals, and reduce admin.

- ⚙️ Realtime parts & labour updates
- ⚙️ Multi Supplier collaboration
- ⚙️ Automated workflow syncing
- ⚙️ Connect with trusted partners including Vapta, HGV Direct and more

Job Status API

Designed for managing Scania-linked job sheets, this SOAP-based integration lets users update job statuses such as Planned, Booked or Onsite, directly from r2c.

Asset API

The Asset Creation API allows users to create and update assets directly within r2c. It supports extended data fields like axle configurations, maintenance products, and custom fields, making it ideal for more complex fleet setups.

Lease Company API

Built specifically for lease companies and R&M users, this API simplifies asset management by enabling automated asset creation, maintenance tracking, and lease-specific data fields.

Custom API Access

Need something more specific? r2c offers custom API development to meet unique business needs. Whether integrating with telematics, ERP platforms or legacy systems, our development team can work with you to create tailored solutions that streamline your workflows and connect your wider tech stack.

Installing new systems can be daunting

We make it delightful.

Up front, and centre

An all-inclusive package with no hidden costs, plus free hosting, maintenance and disaster recovery.

First class training

Our trainers will get your staff up to speed in no time, ensuring a swift implementation.

Free new stuff

Over the air updates regularly enhance the package and offer innovative new tools.

Up and running and on board

Our implementation team will get your account up and running, and deal with any queries as you onboard your fleet.

Need a chat?

The support team are always available to talk via phone, email, live chat or face-to-face.

Case Study

John Pearce Glynneath Ltd.

John Pearce Glynneath Ltd is a family-run transport and warehousing company which has just celebrated its 50th anniversary. They operate throughout south and west Wales, in addition to operations across the UK, Ireland and Europe. As well as transportation and warehousing, it also operates its own in-house workshop facility.

The way things used to be

Prior to signing with r2c in 2018, John Pearce Glynneath Ltd was generating vast amounts of paperwork from its operations, resulting in a heavy flow of paperwork from its workshop to the transport managers. The business decided to change and set about streamlining communication between its various departments.

Problems they faced & how r2c solved them

To reduce the amount of paperwork being generated, John Pearce Glynneath Ltd adopted r2c's Workshop R2c and Inspect software, alongside issue2invoice. With the introduction of tablet devices across the business this meant that all driver pre-checks could be carried out digitally and fed through in real-time to the workshop and transport managers, allowing more efficient scheduling and defect management applications.

The aim

John Pearce Glynneath Ltd is aiming to achieve Earned Recognition status and has adopted r2c's Exemplar Operator package, comprising Operator r2c, Driver Pre-use Check App and Vantage Point. These systems work together to give transport operators all of their compliance data in a single, easy accessible location, gives 'early warning' alerts about any potential compliance breaches before the DVSA is notified, shares all audit data with the DVSA to show safety and legal requirements are being met, and also ensure minimised vehicle off-road time thanks to fewer DVSA roadside inspections and enforcement visits.
