

COMMERCIAL SAFETY SOLUTIONS

ABOUT US

Parksafe Group have been partnering with some of the largest fleets across the UK, Europe, and internationally for almost 40 years.

Specialising in vehicle safety equipment, Parksafe Group designs, manufactures, and supplies a wide range of reliable, cost-effective, and quality-assured products for the global automotive industry.

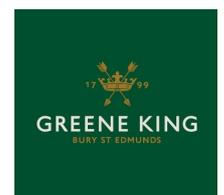

With decades of experience and in-depth industry expertise, we take pride in supporting businesses worldwide in becoming authorised Parksafe Group distributors. We offer bespoke, tailored safety solutions that are designed to meet the unique needs of each customer, wherever they are located.

NATIONWIDE INSTALLATIONS

Parksafe Group offer a full fitting and vehicle installation service. Our Parksafe Approved Installers offer a network of professional engineers, who are driven by providing the highest standards of vehicle installation services and support across the UK.

Our Parksafe Approved Installers have been carefully hand picked for their technical knowledge, fitting capabilities and customer service. Our highly skilled engineers can install any vehicle safety equipment from reversing cameras, DVS kits to alarms, DVR Systems and Dash Cams. Backed up by our knowledgeable Customer Service Team, Parksafe Group provides an efficient installation service from start to finish. We aim to exceed the installation needs of our customers, offering complete turnkey planning, project management, customer support, engineering and vehicle integration expertise.

CONVENIENCE

Our extensive network of engineers will install your equipment at any location convenient to you. If you have a fleet of vehicles, we understand that keeping it on the road is of prime importance so we'll happily arrange installation around your schedule to minimise downtime.

QUALITY

All our engineers are experienced and fully qualified specialists, who are insured to work on any vehicle. All new equipment is tested and fully demonstrated before we leave.

ON DEMAND

TAKE CONTROL OF YOUR FLEET, **ANYTIME, ANYWHERE!**

On Demand LIVE online portal offers 24/7, instant access to your entire fleet of vehicles.

This advanced IOT platform enables Fleet Managers to quickly retrieve real-time information and reports at any time, day or night. View LIVE, high-definition footage and remotely download video from up to 12 cameras. Track vehicle locations in real-time and access historical footage for up to 60 days.

Users can view live and historic footage and data whilst the vehicle is on the road. There's no need for the vehicle to return to the depot before viewing or downloading footage, saving valuable time in resolving disputed claims. Not only will you be able to improve driving styles using our state of the art *On Demand* driver behaviour reports, you will instantly have full access to your fleets whereabouts.

BENEFITS

COMPREHENSIVE CAMERA SETUP

Customise up to 12 cameras for complete coverage of your vehicle, both inside and out.

COLLISION PREVENTION

Assists the driver to reduce the risk of accidents and enhance overall safety.

ENHANCED MEMORY CAPACITY

Increases storage to retain more footage for longer durations.

ADVANCED SAFETY FEATURES

Incorporate AI-powered side and front cameras for improved safety and awareness.

FUTURE-READY FLEET

Prepare your fleet for evolving regulations and compliance requirements..

INTEGRATED TELEMATICS

Fully connected for seamless telematics integration.

ON DEMAND

DRIVE SMARTER WITH ON DEMAND TELEMATICS

Parksafe Group's *On Demand* platform is a powerful, cloud-based tool designed to give Fleet Managers complete visibility and control over their vehicles both in real time and historically.

The platform offers live HD video streaming, remote video downloads, and detailed safety reports, helping Fleet Managers, Operators and Drivers stay informed and proactive. From monitoring **vehicle performance** or **tracking driver behaviour**, *On Demand* ensures fleets remain compliant with safety standards while maximising operational efficiency.

Fleet Managers can generate automated incident reports that highlight trends, identify risk factors, and inform targeted training. Real-time driver behaviour insights, such as speeding, idling, harsh braking, acceleration, and deceleration, allow for ongoing performance improvement and risk reduction.

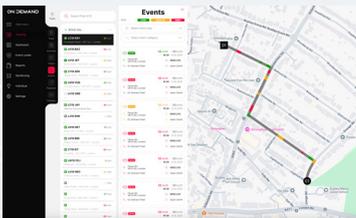

TRACKING

Track your fleet's location 24/7, 365 days a year.

Access to real-time and historical location data provides valuable geographical evidence to help protect against fraudulent claims.

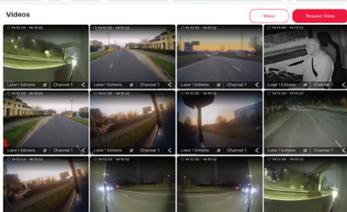

JOURNEYS & EVENTS

Easily monitor your entire fleet's Journeys through the Dashboard. Events are clearly colour-coded by risk level (low = **Green**, medium = **Amber**, and high = **Red**) so you can quickly identify and prioritise issues.

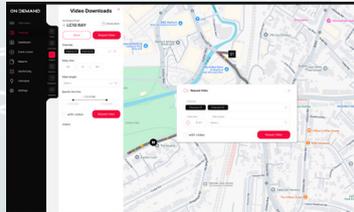

Each event expands into a dedicated view where you can access all related video footage, telematics data, and timestamps for a comprehensive overview.

LIVE VIDEO

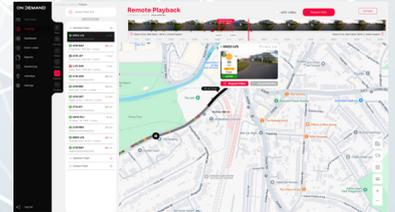

Easily view live video footage with a single click using the Tracking Timeline. Locate your entire fleet in real time and instantly access live footage right from the map.

REQUEST VIDEO

Easily request video footage from up to 12 cameras with just one click. Customise your request by selecting specific details such as time and duration.

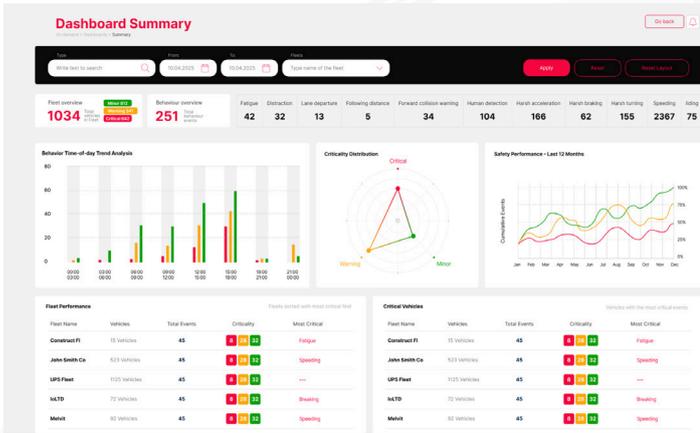

REMOTE PLAYBACK

Remotely view live and historical video linked to specific events. Use the event timeline to easily navigate footage and watch up to 12 camera angles for quick and efficient incident review.

ON DEMAND

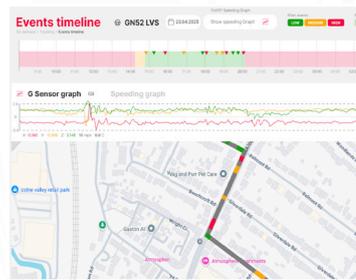

DATA-DRIVEN SAFETY INSIGHTS THAT **DELIVER RESULTS!**

Our data-driven safety reports provide access to detailed incident data that track trends, identify risk factors, and inform targeted training.

With advanced monitoring systems, we capture all critical aspects of your fleet's operations, from driver behavior to vehicle performance. These comprehensive reports help pinpoint emerging trends, address potential issues, and ensure ongoing compliance with safety standards, enhancing overall fleet safety and efficiency.

EVENTS TIMELINE

The Events Timeline allows Fleet Managers to easily visualise the sequence of key moments throughout a journey. It offers a clear overview of events and supports in-depth behavioural analysis by bringing together data into a comprehensive driver performance profile.

GEOFENCING

Geofencing enables Fleet Managers to set virtual boundaries around key locations, triggering real-time alerts to the Operators and Drivers when vehicles enter or exit designated zones.

This powerful tool enhances security, ensures route compliance, and boosts overall operational efficiency.

REMOTE IMMOBILISATION & REMOTE WAKEUP

Do you confirm Remote immobilisation

The vehicle will be remotely immobilised for security or safety reasons. Engine restart will be disabled.

▲ Do not attempt to operate the vehicle until clearance is given.

Cancel CONFIRM

Our Remote Vehicle Immobilisation device provides an additional layer of security, control and safety by allowing Fleet Managers to remotely disable a vehicle's ignition in the case of theft or unauthorised use.

With Remote Wakeup, you can activate your DVR or Dash Camera from anywhere, allowing you to download footage without needing to visit your vehicle in person.

Do you confirm Remote wakeup

The vehicle will be remotely immobilised for security or safety reasons. Engine restart will be disabled.

▲ Do not attempt to operate the vehicle until clearance is given.

Our intuitive colour-coded Health Check Overview - **GREEN** for healthy and **RED** for issues - highlights potential problems at a glance helping you identify issues early - keeping your fleet road-ready and running at peak performance.

HEATMAPPING DATA

Our advanced heat mapping technology seamlessly integrates with several of our innovative solutions, including our AI Human Form Recognition Cameras. These cameras automatically detect triggered events – such as activity on a road or construction site – and generates real-time heat maps to highlight high-risk zones. This visual data can then be used to enhance safety training and educate personnel effectively.

Additionally, the heat mapping functionality works in tandem with our award-winning Low Bridge Detection System, clearly indicating areas where alerts have been activated to further improve situational awareness and response.

DRIVER MONITORING SYSTEM

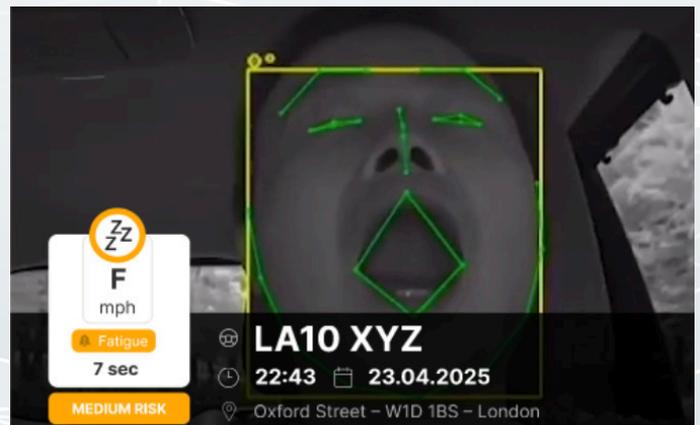

- ! FACE DETECTED
- ! PHONE DETECTED
- ! DISTRACTED

Tired drivers have slower reaction times and suffer from reduced attention, awareness, and ability to control their vehicles. Research suggests driving tired can be as dangerous as drink-driving.

Parksafe Group's Driver Monitoring System (DMS) detects and warns of bad or unsafe driving habits, such as drowsy or distracted driving or using a mobile device and smoking, thus ensuring road safety and driver health.

Furthermore, when used alongside our *Live On Demand* Platform, Parksafe Groups DMS can further enhance driver safety by alerting the Fleet Manager. This means that the Fleet Manager can check on their driver to ensure they are okay.

The camera is mounted on the dash and provides a full view of the driver, without obstructing their view of the road.

FATIGUE IS A MAJOR CAUSE OF ROAD CRASHES IN THE UK

Parksafe Group's DMS helps fleets prevent accidents and improve productivity by monitoring the key risk factors, alerting drivers to dangers in real time and informing managers using notifications and interactive reports.

LOW BRIDGE DETECTION SYSTEM

PARKSAFE GROUP'S AWARD WINNING

CLICK QR CODE TO VIEW MORE

Bridge strikes and collisions are increasing every year. Data published by Network Rail found that between 1st April 2021 and 31st March there were 1,833 bridge strikes reported across the network.

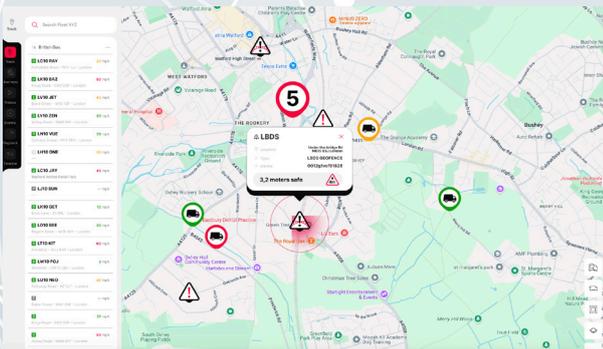

Winner of The Worshipful Company of Carmen's Viva Shield Award. Parksafe Group's innovative Low Bridge Detection System (LBDS) has been designed and manufactured in the UK and can detect up to 3,764 upcoming low bridges within the UK, using a database that is continuously monitored and managed.

The hardware installed on the vehicle carries the database

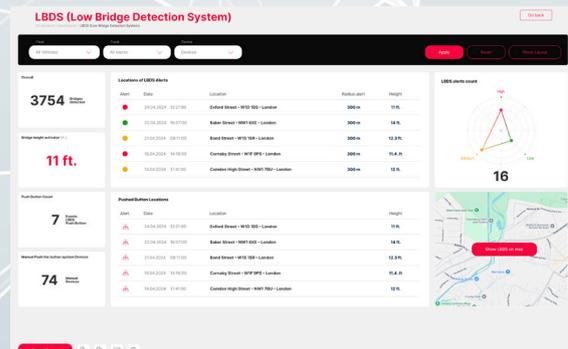

offline – so no data connection is required. Furthermore, it requires ZERO driver input as this data is inputted to the device during the installation process. As well as GPS vehicle location data and geo-fencing hardware, the LBDS includes a display which is installed discreetly into the cab.

When the vehicle enters a geo-fence (at least 150m away) from a low bridge it will alert the driver. This provides the driver with ample time to check the vehicle height using the in-cab display equipment, or safely pull over and choose a more appropriate route if required.

LBDS GEOFENCE

LBDS DATA DASHBOARD

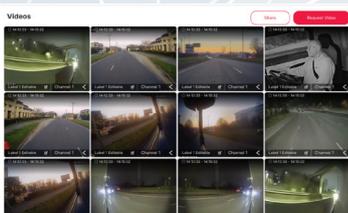

VEHICLE CCTV

Vehicle CCTV is an essential part of any modern fleet, helping to ensure your business and employees are protected from both potential accidents and costly insurance claims.

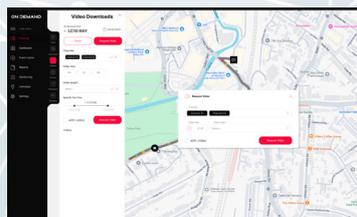

As one of the leading safety solutions providers, passenger and vehicle safety is at the forefront of everything we do. Parksafe Groups Vehicle CCTV solutions offer multi-camera recording, live-view capabilities and driving aids to improve safety and deter theft.

LIVE VIDEO

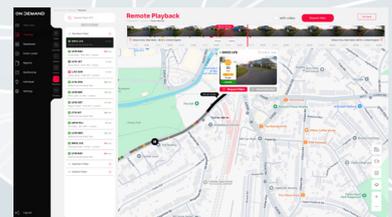

Easily view live video footage with a single click using the Tracking Timeline. Locate your entire fleet in real time and instantly access live footage right from the map.

REQUEST VIDEO

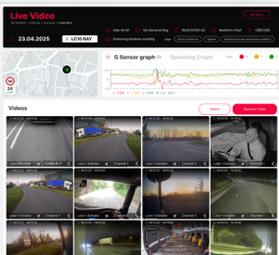

Easily request video footage from up to 12 cameras with just one click. Customise your request by selecting specific details such as time and duration.

REMOTE PLAYBACK

Remotely view live and historical video linked to specific events. Use the event timeline to easily navigate footage and watch up to 12 camera angles for quick and efficient incident review.

CONNECTED DASH CAMERAS

Parksafe Group's On Demand 4G Connected Dash Camera is an **ALL IN ONE** fleet solution, delivering a connected video system with integrated telematics to suit any application!

Available in both **One-Channel** and **Two-Channel** versions, you can live stream cameras in real-time, pinpoint vehicle locations, and access detailed reports through our On Demand web platform. This provides you with complete visibility of your fleet, 24/7.

FEATURES & BENEFITS

DVS 'PROGRESSIVE SAFE SYSTEM'

From October 2024 all Heavy Goods Vehicles (HGVs) over 12 tonnes **MUST** have a minimum of a three-star DVS safety rating to operate in Greater London.

As a leading Vehicle Safety Specialist, Parksafegroup have developed a compliant Ai-driven DVS PSS solution that has been independently tested and verified to confirm that it meets ALL TfL's specifications. Including Moving Off Information Systems (MOIS) & Blind Spot Information System (BSIS).

THE FORS STANDARD

The Fleet Operator Recognition Scheme (**FORS**) is a national accreditation scheme aimed at Fleets of all sizes who are looking to improve their operational standards. **FORS** aims to drive up industry standards by encouraging and training fleet operators to measure and monitor performance. The scheme builds on the minimum standards required by law, encourages continuous improvement and monitors new emerging practices within the fleet sector.

FORS offers three levels of progressive accreditation: **Bronze**, **Silver** and **Gold**. The accreditations are awarded when an operator meets specified requirements of the FORS Standard.

Parksafe Group can provide expert advice and supply a wide range of FORS approved equipment to increase safety for drivers, the public and other vulnerable road users, ensuring that your Fleet is compliant with all specifications. Our knowledgeable team can also deliver LIVE analysis on your entire Fleet, through Parksafe Group's On Demand reporting platform.

HUMAN FORM RECOGNITION CAMERA SYSTEM

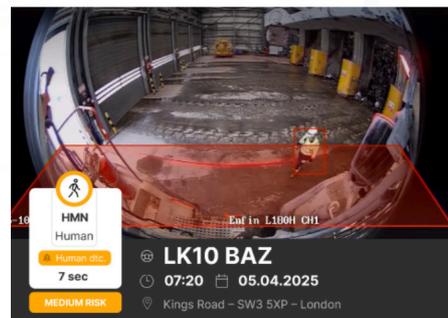

THE NEXT GENERATION OF **AI BLIND SPOT DETECTION**

Commercial Vehicles are large and heavy, making them harder to manoeuvre and slower to stop, especially in tight or busy areas. Limited driver visibility creates blind spots, putting Vulnerable Road Users (VRU's) - like pedestrians, workers and cyclists and risk.

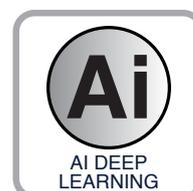

With Parksafe Group's advanced Ai Detetion system enhances driver awareness with colour-coded distance alerts (red, amber & green) on an in-cab monitor, helping drivers make safer decisions in congested enviroments.

The Pedestrian Detection camera can be used as a single camera or with a multi-camera system, making it ideal for Coaches, HGVs and Plant vehicles.

EVENT TRIGGERED

Auto uploads straight onto the On Demand Platform.

360° BIRDS-EYE SAFETY SYSTEMS

LIVE 360° VIEWS ALL AROUND YOUR VEHICLE

Parksafe Group's **Ai Intelligent Pedestrian Detection System** and **360° Full HD Birdseye View** supports drivers in detecting and protecting VRU's by eliminating blind spots and cleverly displaying objects near the vehicle. When an object is detected, drivers are alerted with audible and visual warnings.

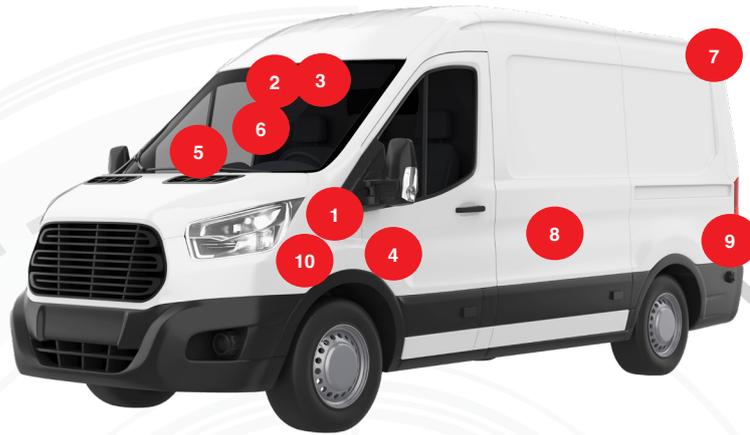

Our **360° Camera System** consists of FOUR ultra wide angle 1080p cameras which are mounted to each side of the vehicle. The crystal clear camera images are cleverly stitched together, resulting in a LIVE 360°, birds eye view all around the vehicle, resulting in zero blind spots around the vehicle and increased driver awareness.

This safety solution is available as a non Ai Camera System or an Ai Camera System to pick up VRU's.

BESPOKE SOLUTIONS

With our extensive industry knowledge of over 40 years we understand the pain points and challenges that you can be faced with. Here at **Parksafe Group** we take a pro-active approach, working alongside clients to create bespoke, high-quality solutions to suit your needs.

No matter how complex the problem is, we will work with you to create a bespoke a solution to fulfil your requirements.

We pride ourselves on offering outstanding quality of service and support to all our valued customers, large or small, establishing us as one of the leading suppliers of automotive products to the industry.

FINANCE OPTIONS

DID YOU KNOW? WE OFFER LEASE FINANCE PACKAGES..

Parksafe Group are pleased to offer lease financing options for our vehicle safety solution packages (minimum order value £1,000). This allows you to spread the cost of your equipment package over an agreed term, providing greater financial flexibility.

Parksafe Group lease financing begins from just 73p per day.

EDS COURIERS CASE STUDY

For Fleet Managers running fleets of any sizes there are many challenges. From issues with speeding, difficult insurance claims, expensive premiums to limited or sometime no visibility of the fleet when it's out on the road. Where there is a large fleet it's no surprise that these issues are plentiful and that's why video telematics which combine video data, computer vision technology and vehicle data are a real game changer.

“ We have worked closely with Parksafe Group for a few years now and have since seen a 70% reduction in speeding events. Working with Parksafe Group we have technology that benefits our fleet, drivers and our customers. I would certainly recommend them and look forward to working in partnership in the future. ”

Colin Nonis, Chief Operating Officer

CHALLENGES.. E.D.S. Couriers are an APC and PalletForce depot, with 2 branches in Cannock and Stoke, in Staffordshire. With a large fleet of vehicles the organisation had been experiencing various challenges with its fleet, including:

- Substantial speeding incidents across all drivers.
- 50 / 50 claims taking a long time and no video evidence to prove the event.
- Insurance premiums at a high.
- No visibility for head office managers on the drivers whereabouts.

THE TRAIL.. E.D.S. Couriers & E.D.S. Stoke LTD handle over one million parcels each year with a promise to 'treat every single parcel with the same high levels of care and attention your products deserve'.

Keen to look at solutions to the challenges of running a fleet of 85 LCV's, 22 HGV's and 6 Cars they trialled Parksafe's On Demand platform with the following products.

LCV's: 5 Camera Vehicle Camera System with Full Telematics Suite & Driver Behaviour Reports.

HGV's: 7 Camera Vehicle Camera System with Remote Tachograph Downloads & Driver Behaviour Reports.

CARS: Front and Rear 1080p 4G Dash Camera with Telematics and Driver Behaviour Reports.

THE FINDINGS..

70% reduction
in speeding events

50 / 50 claims reduced.
Saved time & money
in excess of £50k

Proof of deliveries
with footage of
loading & unloading
the goods

Improved driver behaviour
by briefing drivers
and issuing fines
awhere necessary

Reduced driving incidents
with spot checks for
wearing seat belt
and not eating
