

BEST CHOICE BETTER PRICE GOOD QUALITY

THE BEST GRANULATOR KNIVES SUPPLIER FROM TAIWAN

■ TAIWAN KNIVES CO.,LTD R.Y. GROUP ■

40 Years Professional Technique Experience And Using Sophisticated Equipments

RuenYuan Group Can Provide Solid , Inlaid Steel and Variety Materials .

The Best Solution For Crushing , Cutting And Pelleting .

RuenYuan Group Can provide You Good Quality and Competitive Price.

慢速機邊粉碎機刀片

Low speed granulator blades

專業生產慢速粉碎機刀片。

優點：

1. 提供SKD11, D2, ASP23等多種材料,針對不同需求共您選擇。
2. 專業的熱處理設備,配合最少三次的回火處理(可選擇深冷處理),讓材料發揮其最好的性能。
3. 所有的刀片都依照標準化、規格化生產,讓您可以無顧慮的隨意單片替換。
4. 專業化的生產設備,月產量可達3000套以上。
5. 圓齒刀可以提供螺旋式的刀口,以點破壞替代線破壞,切削更省力。
6. 圓齒刀可加磨螺旋溝,比單純只研磨刀背(外徑)更鋒利,所以粉碎時更省力,更省電,低噪音,少粉塵,環保效益都提高。

Strengths:

1. Material: Variety materials such as SKD-11/D2, ASP series, T15, etc. We provide a perfect solution for different kinds of needs.
2. Heat treatment: We have the best vacuum furnace from Europe and we promise to do at least 3 times tempering for each blade.
3. Capacity: Our special equipment for low speed granulator blades can produce 3000 sets every month.
4. Standardization: Customers can replace any blades without consideration.
5. Specialty: Screw-type cutting edge for rotating blades can makes less resistance and avoid blockage . It will improve cutting performance and efficiency. Grinding the back rake angle of the cutting edge not only can helps reduce vibration, dust and noise during cutting but also can save energy.

水中造粒、切粒機刀片

Underwater pelleting blades & pelleting blades

專業生產慢速粉碎機刀片。

優點：

1. 多樣化的材質如M2,M42 , M48,ASP23 , T15等可針對不同需求，提供完整的解決方案。
2. 表面粗糙度可做Ra0.4，可以依要求針對刀口鏡面研磨。
3. 鏡面研磨除了成品裁切效果漂亮，刀片使用的壽命也會提升。
4. 針對膜頭切刀我們提供複合式的硬度，解決容易斷裂的問題。在同一個材質的刀片上，將刀口硬度控制在HRC 61-64，但刀身硬度會控制在HRC30-40，這樣不僅可讓刀口發揮M2材質應有的高耐磨特性外，刀身也因為硬度降低，具有高韌性！！

Strengths:

1. Variety materials such as M2, M42, M48, ASP23, T15, etc. We provide a perfect solution for different kinds of needs.
2. Surface roughness can reach Ra0.4, blades can also be mirror polished if needed.
3. Mirror polishing can get better cutting performance and prolongs blade's usage life.
4. Normally pelleting blades can be fractured easily, but our composite hardness design solves this problem. The hardness of cutting edge can be controlled around HRC 61-64, and the hardness of the blade body can be around HRC30-40. This not only brings the fullest abrasion resistance property from M2 material, but also increases the flexibility of blade due to the reduced hardness!

圓刀系列產品

Circular Cutter Series

本公司精製各種產業用圓刀系列產品、品質優良、精準度高、厚度公差可達0.002m/m以內。

材質:SK-5、SKD-11、SUS-440C、420-J2、SKH、TC，在分條機、

包裝機、食品機械、塑膠機械、金屬機械

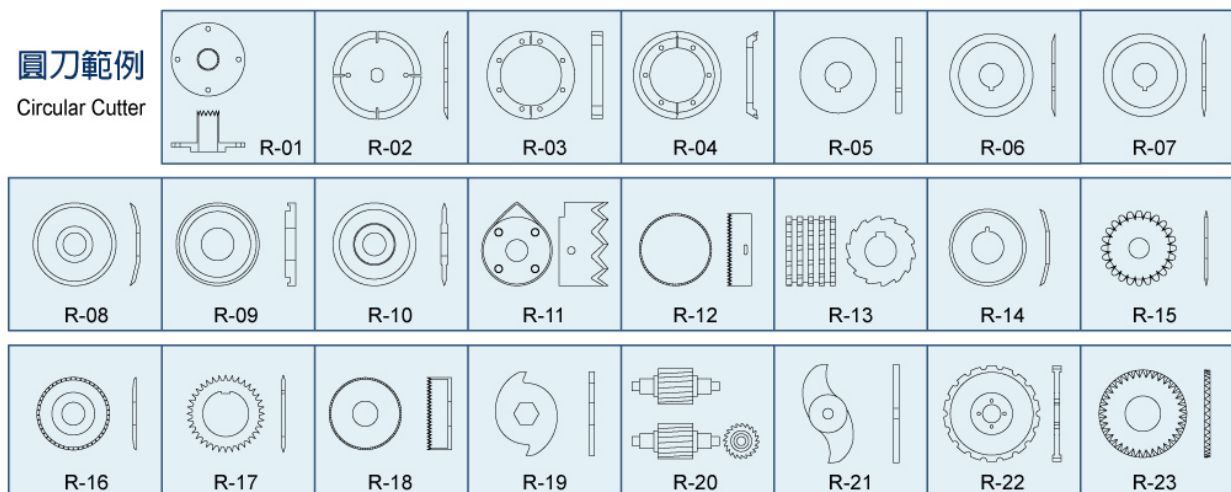

以及其他特殊用途機械上都有很好的表現。

We manufacture a wide range of circular cutters for various industries.

Our superior high-performance products have thickness tolerance of within only 0.002mm. Made with SK-5, SKD-11, SUS-440C, 420-J2, SKH, or TC, our products work well in slitting machines, packing machines, food machinery, plastic-item making machinery, metalworking machinery, and special-purpose machinery.

Circular Cutter

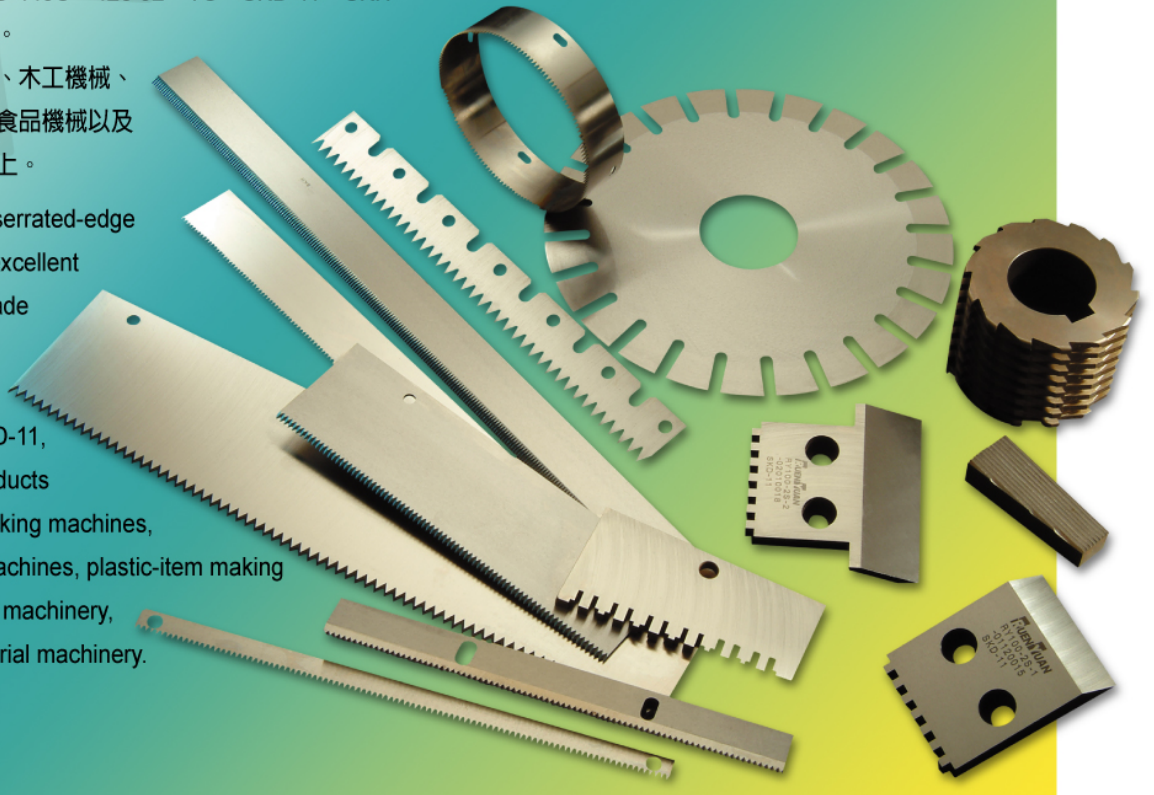

齒刀系列產品 Cutters With Serrated Edges

本公司精製各種齒刀系列產品、品質優良、平直度特優。

材質:SK-5、SUS-440C、420-J2、TC、SKD-11、SKH，
依需要而採用之。

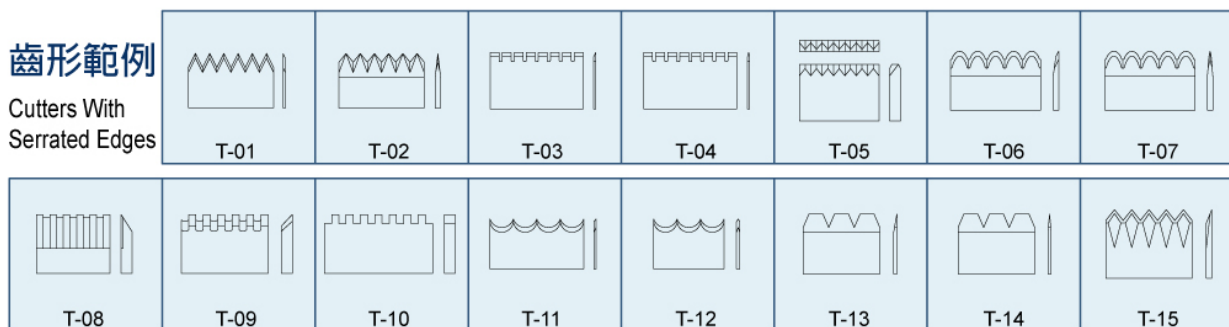

使用在包裝機械、木工機械、
塑膠製品機械、食品機械以及
其他之產業機械上。

Our top-quality serrated-edge
cutters feature excellent
straightness. Made
using SK-5,
SUS-440C,
420-J2, TC, SKD-11,
or SKH, our products
are ideal for packing machines,
woodworking machines, plastic-item making
machinery, food machinery,
and other industrial machinery.

Raise Your Performance to Next Level!

Taiwan Machine Knives Group

Solid steel has its limitations – it can not deliver both optimal toughness and wear resistance at the same time. That's why we developed our inlay steel: a combination of different steel types, engineered to integrate the best qualities of each.

About Our Company

We operate factories in both Taiwan and China. Since 1980, we have specialized in manufacturing blades for cutting, pelletizing, and crushing applications.

Our goal is to deliver effective solutions, cost-efficient products, and maximize value for both our clients and ourselves.
