

# Puppet Enterprise

**Empowering automation — simply, safely, everywhere and at scale.**

Puppet Enterprise enables both individuals and teams to get started with automation simply, deliver infrastructure safely, and expand automation across everything, no matter where it lives. It is the only solution that meets you where you are on your automation journey, and grows as your automation footprint grows, too.

## Automate simply

Puppet offers a portfolio of products to simplify infrastructure delivery — from testing to deploying and managing everything you have, no matter where it lives. It's now even easier to get started with automation regardless of skill set or DevOps maturity level. With Bolt, our open source task runner, get started quickly by standardizing your existing scripts and making them easily consumable for the rest of your organization. Bolt offers the first step towards standardizing what you already have, and automating routine tasks that prevent you from tackling bigger problems.

## Automate safely

As you begin adopting automation at scale, it can be difficult to manage infrastructure changes across the organization. With automated and predictable processes for deploying code, Puppet helps organizations safely scale their automation across teams and provides greater insight and confidence that the changes made across the infrastructure are implemented safely. Additionally, teams with complex infrastructure benefit from Puppet's continuous enforcement of desired state and reporting capabilities to ensure security and compliance requirements are met and exceeded. Key capabilities like module delivery pipelines, impact analysis and simplified Puppet deployments with Continuous Delivery for Puppet Enterprise, help teams scale safely and deploy Puppet code with confidence.

## Automate everywhere, at scale

Manage heterogeneous infrastructure in a consistent way so you can manage more. With Puppet Enterprise you can scale both your infrastructure automation efforts and team workflows while easily implementing continuous delivery best practices. Puppet Enterprise is the only solution that combines both model-based and task-based capabilities in a way that enables organizations to scale as their automation footprint grows. With agent-based and agentless capabilities, you have the flexibility to automate what you want, and how you want.

## The Puppet difference

- Ramp your automation efforts and easily get started with Bolt.
- Test your Puppet code and see the impact before deploying with prescriptive and codified continuous delivery capabilities.
- Adopt model-based approaches for scalable drift remediation (gain insight into corrective vs. intentional changes).
