

Scalable Workforce Management Software

For Cleaning Professionals Around the World

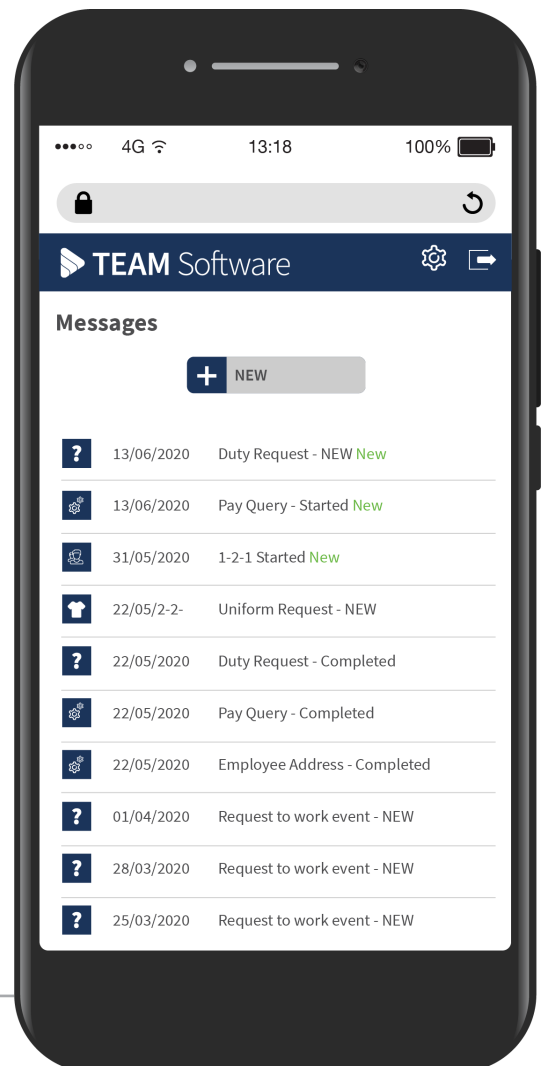

Timegate

What is Timegate?

Timegate from TEAM Software is a purpose-built workforce management system for cleaners. It contains the functionality and features you need and appreciate, many of which simply aren't offered by competing applications.

For over 30 years, Timegate has been honed to help cleaning organisations like yours operate more efficiently, and lower risks and costs. Timegate supports the dynamic you have with your customers, and contracts, as well as your employees. Timegate is both scalable and affordable. The basic system allows you to start simple and then you plug in packs as your demands grow.

Get started with **Timegate Essentials**, then add on additional packs depending on your specific business needs.

Essentials

Timegate's Essentials pack is the foundation for effectively managing workforce information about your clients and your employees and their locations. It helps you map delivery of both your contractual and financial performance, plus the schedules, rosters and plans that combine them. It also includes access to the Time & Attendance tools you need to prove your service delivery, plus dashboards and reporting for the analysis you expect from a workforce management solution.

Finance

The Finance pack provides precise and automated calculations for paid and unpaid absences like vacation, maternity and paternity pay, personal development time and more — calculating your gross payroll when all is said and done. By giving you systematic control of your data and removing human error and data security issues, the Finance pack is often used to integrate to payroll systems (for net payroll), ERPs and HR platforms. It also ensures safe, secure and rapid transport of information.

E-Engagement

Workforce collaboration and automation increases productivity and reduces costs. By intelligently automating processes and saving time, you also drive up employee satisfaction. Access to increased and highly relevant information when it's wanted or needed, as well as rapid self-service where it matters, translates into happier employees, better employee retention, and reduced effort hiring, onboarding and training — all of which leads to improved service delivery.

Service

Service from Timegate is disrupting traditional workforce management and field service tools, to truly digitise service delivery and management. By tracking all incidents, activities, routes, patrols and site occurrences, Timegate brings a new dimension to the connected workforce.

Recruitment

The Recruitment pack sets the standard in productivity of onboarding employees. If you are seeking to achieve better compliance, or perhaps just lower the costs and/or risk associated with traditional recruitment and onboarding, then the Recruitment pack is for you.

Insights

Timegate's Insights pack provides our clients with an easy to use, easy to implement Business Intelligence (BI) tool to begin your analysis journey. Even if you just want access to our data warehouse so you can plug your own existing BI tools into Timegate, our solution is here for you. Harness the power of your data to give yourself the critical advantage.
