

Create, populate and submit your forms digitally with simPRO's **eForms**.

Use the eForms add-on in simPRO to create customised form templates which easily capture your incoming data.

Handle form creation and data capture with ease

If you are capturing safety information or job, quote or audit details, eForms provides an easy way to collect and share these important details accurately. simPRO allows you to digitise and streamline the process for creating, editing, managing and submitting forms. Create templates and autofill forms with data in your simPRO build. For easy sharing, automatically attach your forms to the corresponding job.

Form filling on the job site

Allow field staff to fill in and submit digital forms that have been pre-loaded into simPRO using a tablet or mobile device whilst in the field. Create unique logins for sub-contractors and staff so they can easily capture photos and customer signatures while on site and submit electronically. You can view, edit, download and archive all forms submitted from the eForms app. The eForms app is available for download from the App Store for iOS devices and from Google Play for Android devices. Access to the eForms add-on is required to use this application.

Key Features

- Workflow automation
- Form customisation
- Two-way sync
- Mobile app

Technical Requirements

- iOS 11.0 and up
- Android 5.1 and up
