INTELEX

INCIDENT MANAGEMENT

Tracking and managing incidents in the workplace can be a daunting task for any organization. Intelex's Incident Management application allows you to manage the full lifecycle of your incidents to mitigate risk, ensure compliance, streamline reporting, and gain complete visibility into your incident management program. Record, track, analyze, and leverage incident data in an intuitive online system to ensure that incidents are quickly responded to, investigated, closed, and ultimately reduced.

HEALTH AND SAFETY

WITH INCIDENT MANAGEMENT:

Identify root causes to reduce risk.
When incidents happen, Intelex helps you discover the underlying cause with embedded Root Cause Analysis (RCA) methodologies such as 5-Whys or Wishbone analysis.

Comply with regulatory requirements and international standards.
Whether it is OSHA, RIDDOR, WCB, ISO, EPA, or even rules regarding transportation, finance, or security, Intelex helps you gather, organize, and even automatically report the data.

Boost visibility into your incidents.
Without a 'source of truth' or centralized system of record, incidents may seem unrelated and random. Intelex helps you visualize what's happening to proactively address problematic trends.

Streamline the incident management process.
No duplicate entry, no multiple spreadsheets, no searching for data in different IT systems—Intelex keeps everything in one place to save you precious time and energy.

INTELEX INCIDENT MANAGEMENT

Intelex's Incident Management application provides customers with a best practice methodology for managing incidents, from incident occurrence to the close out of the final corrective action and beyond.

Track all types of incidents – Intelex comes out of the box with responsive forms for employee, property, security, environmental, and vehicle incidents. Use Form Designer to create an incident form for incident types of your choice.

Robust dashboards created for you – incident data rolls up to configurable dashboards that can be created by individual users to visualize data they care about, or created by admins so that EHS managers only see the information relevant to their jobs.
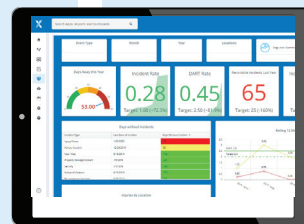

Auto-calculate key incident metrics – Industry benchmarks like DART and LTIR are kept up to date in real time with incident data from across your organization.

Incident management on the go – the Incident Management application can be accessed on a mobile device to record incident details on the scene, view incident details, or carry out corrective and preventative actions (CAPAs) associated with incident investigations.

Intelex saved a 600-person construction company $110,000 on hand injury-related expenses in ONE YEAR. It is no wonder that independent analyst firm Verdantix rated Intelex's Incident Management application as the best in the world versus all other vendors.
